

# ASSESSMENT OF CHILDHOOD AND ADOLESCENT OBESITY IN ARKANSAS

Year 18 (Fall 2020–Spring 2021)  
January 2022

### **Suggested Citation**

ACHI. (2022). *Assessment of Childhood and Adolescent Obesity in Arkansas: Year 18 (Fall 2020–Spring 2021)*. Arkansas Center for Health Improvement. Little Rock, AR.

## Executive Summary

In the United States, more than one-third of children and adolescents are classified as overweight or obese.<sup>1</sup> This population is more likely to be at risk for a variety of health problems, including cardiovascular disease, type 2 diabetes, and bone and joint problems, among others. Children who are overweight or obese have associated chronic conditions and have annual outpatient visit and prescription drug expenditures up to 35% higher than children who are at a healthy weight.<sup>2</sup> Nationally, it is estimated that obesity-related health care costs the health system \$190 billion per year.<sup>3</sup> Preliminary studies have shown increased weight among individuals during the COVID-19 pandemic, which has the potential to raise the rate of obesity both nationally and in Arkansas.

Passed by the Arkansas 84<sup>th</sup> General Assembly, Act 1220 of 2003<sup>4</sup> spearheaded initiatives to address obesity among school-age children in Arkansas. Under this legislation, schools are required to collect students' height and weight measurements and include a body mass index (BMI) percentile by age for each student. This requirement begins in kindergarten and continues for even-numbered grades. The Act also required improved access to healthier foods and beverages in schools, the creation of local committees to promote physical activity and nutrition, in addition to confidential reporting of each student's BMI measurement to his or her parents or guardians biennially.

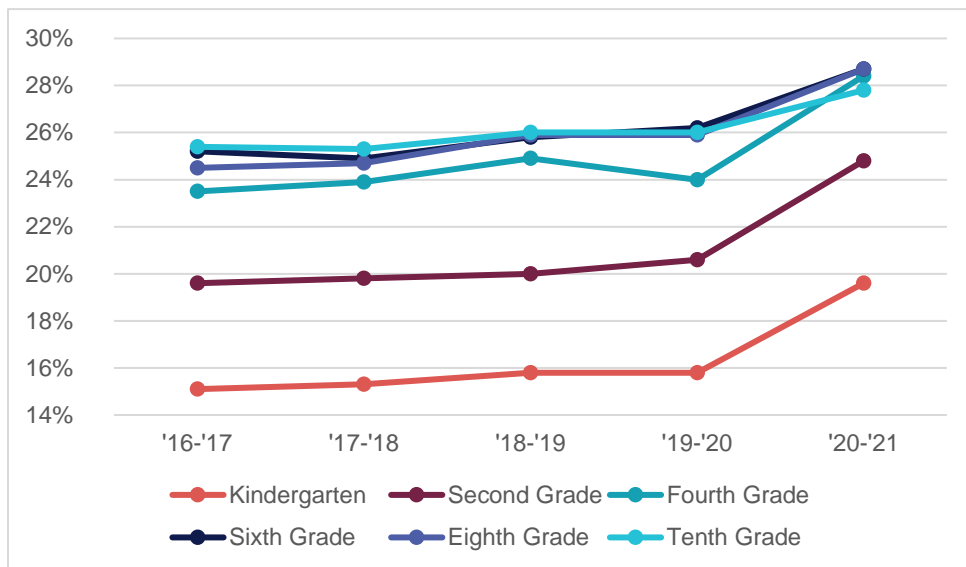

While the statewide collection of BMI data helps inform parents about their child's weight status, data and information from the program may assist in developing new policies and improving health outcomes for all Arkansans. A previous study that used data from the Arkansas BMI screening program concluded that the program has greatly improved the ability to identify children at greatest risk of future obesity, and the ability to predict which children are at an elevated risk of obesity may prove helpful in developing more-effective policies and improved health outcomes.<sup>5</sup> The data is also used by schools, districts, and state agencies when applying for grants.

The following report details the results of Arkansas's statewide student BMI data collection, including weight categories and BMI assessment participation rates for the past five years. The results from the 2020–2021 school year show that more than one in four (26.0%) public school-age children had a BMI measurement classified as obese, up from 22.9% for the 2019–2020 school year. For students in grade 10, 27.8% are classified as obese.

The findings included in this report suggest an increase in childhood obesity in Arkansas as a result of the COVID-19 pandemic and its related impact. This finding is similar to those of studies from other states that indicate individuals have experienced increased weight gain during the pandemic.<sup>6</sup> A large cohort study, which included school-age children and adolescents, found weight gain among the study population in the most recent school year compared to previous years and found that younger children experienced greater relative weight gain than older children.<sup>7</sup> Like these studies, outcomes from Arkansas student BMI measurements from the 2020–2021 school year also demonstrate increased weight gain among students during the initial wave of COVID-19 in Arkansas, particularly among elementary school aged children.

Figure 1 displays the percentage of children with a BMI measurement in the obese category for the past four measurement periods. Each grade saw a statistically significant increase in the percentage of students with a BMI in the obese category in the most recent measurement year, compared to the previous measurement year.

**FIGURE 1. PERCENTAGE OF ARKANSAS PUBLIC SCHOOL STUDENTS WITH A BMI CLASSIFICATION OF OBESE, BY GRADE, 2016–2017 THROUGH 2020–2021 SCHOOL YEARS**

## COVID-19 Impacts and BMI Measurement Collection

BMI data collection for the 2020–2021 school year was met with challenges, as the COVID-19 pandemic continued to impact the lives of students and school staff throughout the state. Many students attended school virtually due to risk mitigation efforts and quarantining protocols. Completion of BMI measurements and data entry was affected by these activities which led to a decrease in valid BMI measurements to 55% of students compared to 64% in the previous year.

Because there were fewer measurements collected in the 2020–2021 school year, ACHI conducted statistical studies to test whether BMI data collected in 2020–2021 represented a cohort of students similar to that of previous years. This was necessary to rule out any selection bias in the data collected, and to ensure that trends could accurately be compared across years.

We used a chi-squared test to compare the distribution of valid measurements in the 2020–2021 school year to the distribution of valid measurements in previous school years. The variables studied were those traditionally associated with having obesity: free and reduced-price lunch status (as a proxy for income level); race and ethnicity; rurality (using rural-urban continuum codes); and district size (defined as large or small districts based on having more than or fewer than 5,000 enrolled students). The outcomes of these comparisons indicated

that there were not significant differences in distribution of these variables in the 2020–2021 cohort compared to the previous study years.

Preliminary studies from other states indicate that individuals have experienced increased weight gain during the COVID-19 pandemic.<sup>6</sup> A large cohort study, which included school-age children and adolescents, found weight gain among the study population in the most recent school year compared to previous years and found that younger children experienced greater relative weight gain than older children.<sup>7</sup> Like these studies, outcomes from Arkansas student BMI measurements from the 2020–2021 school year also demonstrate increased weight gain among students during the initial wave of COVID-19 in Arkansas, particularly among elementary school aged children. The findings included in this report suggest an increase in pediatric obesity in Arkansas as an impact of the COVID-19 pandemic.

Overall, the ongoing collection of BMI data successfully continued for 2020–2021. However, due to COVID-19 impacts and a relatively lower number of students having valid height and weight measurements, results in this year’s report should be interpreted cautiously.

## Introduction

Act 1220 of 2003 established the first state-level legislation in the country to address the alarming prevalence of childhood obesity. The Act is aimed at making changes within schools and school districts to encourage healthier lifestyles for students, school staff, and their families.<sup>8</sup>

Act 201 of 2007<sup>9</sup> amended the original BMI screening requirements of Act 1220 from assessing students in each grade to only assessing students in kindergarten and even-numbered grades 2 through 10. Parents were also offered the option to choose that their child not be screened.<sup>10</sup>

As of this report, 24 states<sup>a</sup> have passed legislation that requires some form of height and weight health assessment and reporting for public school students.<sup>11</sup>

This report focuses solely on the BMI assessments for Arkansas public school students, as mandated by Act 1220 and amended by Act 201.

<sup>a</sup> Arkansas, California, Delaware, Florida, Iowa, Illinois, Kentucky, Louisiana, Massachusetts, Maine, Michigan, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas, Wisconsin, and West Virginia

## BMI Data Collection

The aggregate child BMI assessments presented in this report are an indication of the extent of the problem of childhood and adolescent obesity in Arkansas schools, school districts, and the state.

### PROCESS

To complete the BMI assessments, trained school personnel or student-health professionals obtain one weight and two height measurements for each student. The measurement process is conducted privately with the student facing away from the scale. Data are entered into a secure, web-based computer system that is used to generate individual, confidential child health reports for parents or guardians. All public school students in grades K, 2, 4, 6, 8, and 10 are measured, with a few exceptions (see section titled “Reasons Students’ BMI Could Not Be Assessed” for more information).

### DEFINITION OF BMI

BMI is a constructed value that can be used to assign individuals into underweight, normal or healthy weight, overweight, or obese weight status categories. Using a student’s weight and height measurements, BMI is calculated using the following formula:

$$\text{BMI} = \frac{\text{Weight in pounds}}{(\text{Height in inches})^2} \times 703$$

Boys and girls grow and develop at different rates. Based on the Centers for Disease Control and Prevention (CDC) guidelines, BMI percentiles for students are calculated individually for each boy and girl based upon their gender, age, height, and weight.<sup>12</sup>

Following standard classifications based on expert committee recommendations and used by healthcare professionals, BMI percentiles are used to categorize children according to whether they are underweight, healthy weight, overweight, or obese. For children of similar ages and genders, a higher BMI indicates a greater risk for having or developing obesity-related health problems. These BMI-for-age weight status classifications are as follows:

**Obese:** BMI-for-age greater than or equal to 95<sup>th</sup> percentile.

**Overweight:** BMI-for-age greater than or equal to the 85<sup>th</sup> and less than the 95<sup>th</sup> percentile.

**Healthy Weight:** BMI-for-age greater than or equal to the 5<sup>th</sup> and less than the 85<sup>th</sup> percentile.

**Underweight:** BMI-for-age less than the 5<sup>th</sup> percentile.

## Overview of BMI Reports

### CHILD HEALTH REPORTS

Confidential child health reports are made available to parents or guardians regardless of the student's BMI classification. For the 2020–2021 school year, this report was developed in the Cognos reporting system to replace the previous version of the child health report. This report includes vision, hearing, scoliosis, and BMI screening results and provides simple suggestions to seek guidance from a doctor if necessary.

If the student was assessed, the report includes the height, weight, BMI value, and weight status based on BMI classification. The report includes an explanation of what is considered a normal BMI measurement range, and what to do if a child's BMI is above that range.

### SCHOOL AND DISTRICT-LEVEL REPORTING

Summary BMI profile information is included in Appendix A of this report for individual schools and in Appendix B for individual districts. This information is also published in an online dashboard.<sup>b</sup> For previous reporting years, reports were available to designated school staff through a secure online entry system for each school once BMI data entry was completed. The reports, which are available on ACHI's website,<sup>c</sup> describe the distribution of BMI status among students in each school or district. BMI classifications for schools are presented separately for male and female students by grade and collectively for all students by gender. School district reports combine information from all available school data in that district. Summary statistics for each school and district provide a community assessment of the environmental impact of obesity on public school students.

Please note that in order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is not reported. If fewer than five students are in the overweight or obese groups, they are combined with another group. For example, if fewer than five students are classified as overweight or obese, these two groups are combined and reported as such.

<sup>c</sup> <http://bmi.achi.net/Pages/SchoolPersonnel/BMIProgram.aspx>

## Student and School Participation in the BMI Data Collection

In the 2020–21 school year, 98.5% (1,017 out of 1,032) of Arkansas public schools, in 259 of 261 school districts, contributed measurements in the statewide BMI assessment. Participation rates were slightly higher than in previous years. Fluctuations in the total number of public schools each year are due to school closings, openings, and consolidations.

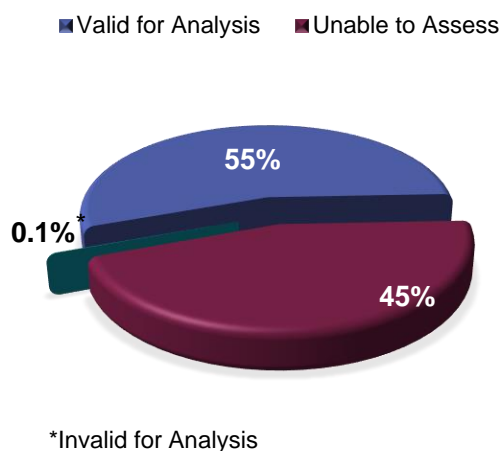

Only schools with students in even-numbered grades were included in this report. The totals include BMI assessments that were submitted by June 30, 2021, for 76.8% (157,743 out of 205,355) of public school students enrolled in grades K, 2, 4, 6, 8, and 10. Among students for whom data was reported, 71.5% (112,786 students) had valid data to allow BMI calculation (see section “Reasons Students’ BMI Could Not Be Assessed”).

Student participation varied by school from 0.23% to 100% of the students enrolled in the required grades. High participation allows for confidence in the results reported by schools and school districts. For those schools or school districts with low participation, under-reporting of select categories is possible.

## Reasons Students’ BMI Could Not Be Assessed

To complete the BMI assessments, schools collected each student’s height and weight measurements. Forty-five percent of students (92,569 out of 205,355) were classified as “unable to assess” because no data was submitted, a reason was given to not assess the student (see Table 1), or the student did not have valid data for height, weight, or both. Table 1 provides a breakdown of reasons for the classification of “unable to assess.” About one-tenth of a percent (145 students; see Figure 2) of data submitted was invalid for analysis due to incomplete or incorrect data provided, measurement protocols not being followed, or inaccuracies in the equipment used to complete the assessment.

**FIGURE 2. YEAR 18 STUDENT BMI ASSESSMENT**

**TABLE 1. REASONS UNABLE TO ASSESS BMI**

Breakdown of Known ‘Unable to Assess’ Reasons		
Child Absent	19,639	44%
Other	12,161	27%
Parent Refused	10,377	23%
Student Refused	2,332	5%
Physical Disability	230	1%
Weight Exceeded Scale	29	0%
Inaccurate Measurements	24	0%
Pregnant	20	0%

## Statewide Results of the Arkansas BMI Assessment

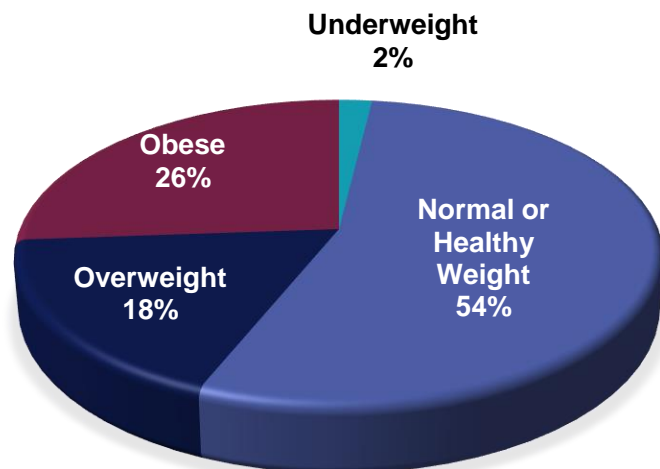

Total public school enrollment in grades K, 2, 4, 6, 8, and 10 for the 2020–2021 school year, reported by the Arkansas Department of Education, was 205,355 students enrolled in 1,032 schools within 261 school districts. The results presented in this section are based on data from 157,743 individual students (enrolled in grades K, 2, 4, 6, 8, or 10) with valid BMI assessments reported prior to June 30, 2021, by 1,017 schools in 259 school districts. BMI classifications are reported by gender, grade, and race and ethnicity. This section includes statewide percentages of underweight, healthy weight, overweight, and obese students for selected demographic subgroups. Percentages for these four classifications are also reported for the majority of school districts and counties in the state (see Appendices B and C).

## BMI CLASSIFICATIONS FOR ALL STUDENTS

Figure 3 illustrates the BMI classification distribution of Arkansas students during the 2020–2021 school year. In Year 18 (2020–2021), 44.0% of Arkansas students had BMI measurements that were classified as overweight or obese.

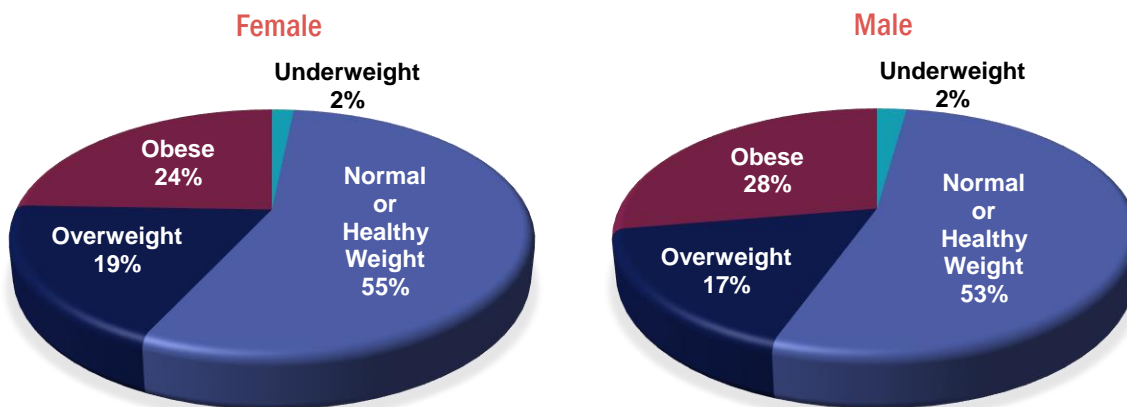

**FIGURE 3. YEAR 18 STUDENT BMI CLASSIFICATION FOR ARKANSAS PUBLIC SCHOOL STUDENTS**

## BMI CLASSIFICATIONS BY GENDER

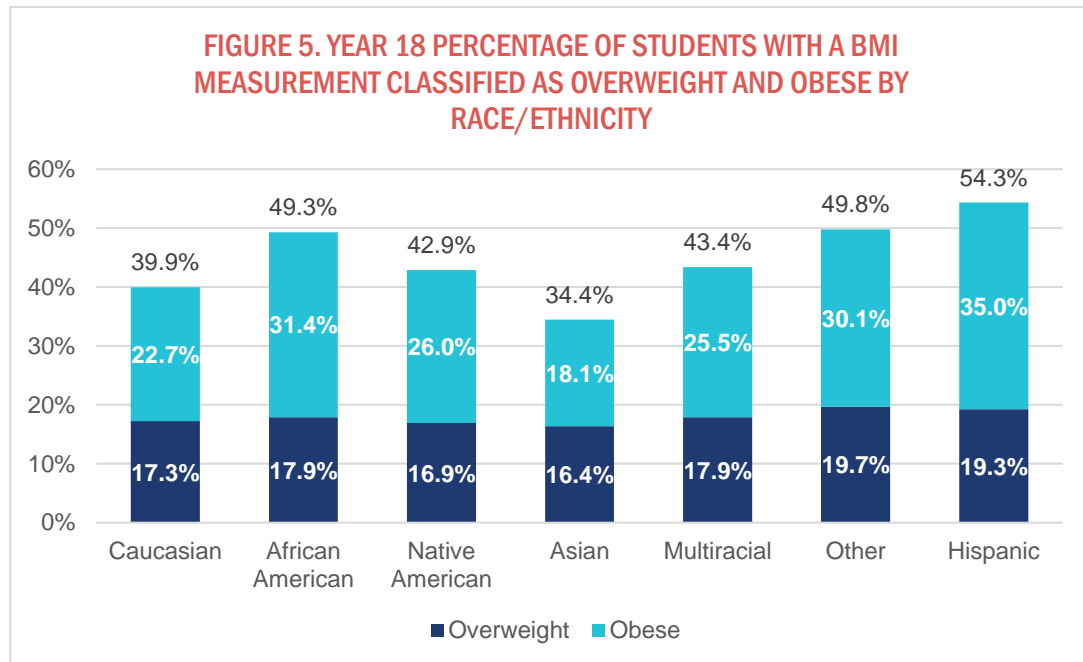

Figure 4 provides BMI classifications by gender for the 2020–2021 school year. More boys (27.7%) than girls (24.4%) were classified as obese. A higher percentage of girls (18.6%) had BMI measurements classified as overweight compared to boys (16.8%). The percentage of BMI measurements classifies as healthy weight for girls (55.3%) was higher than for boys (53.3%).

**FIGURE 4. YEAR 18 STUDENT BMI CLASSIFICATION BY GENDER**

## BMI CLASSIFICATIONS BY RACE/ETHNICITY

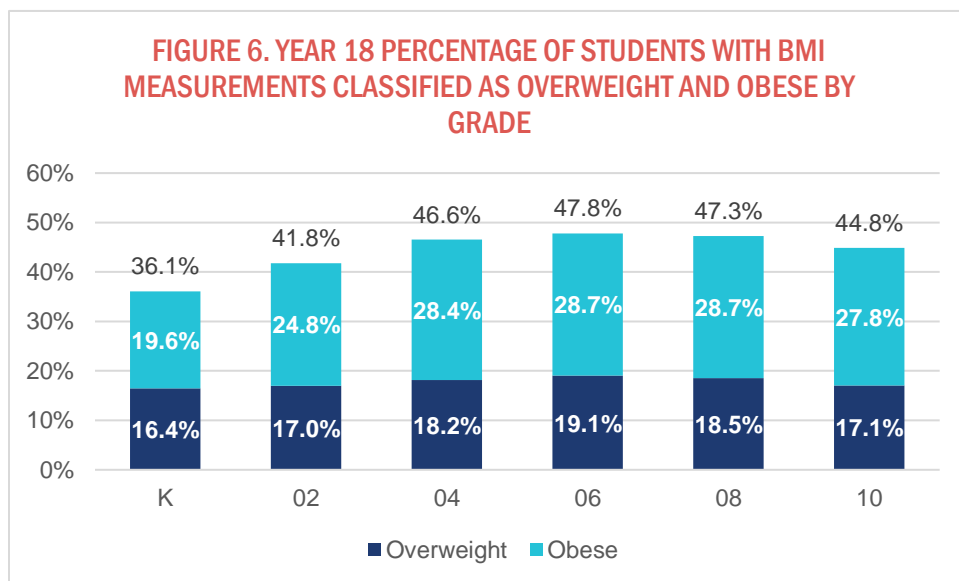

Figure 5 shows the percentages of students with a BMI measurement classified as overweight or obese, grouped by race and ethnicity. As in prior years, Hispanic students had the highest percentage of BMI measurements classified as either overweight or obese at 54.3% combined. Among students grouped

by Other races, 49.8% of BMI measurements were classified as either overweight or obese, followed by 49.3% of African American students, 43.4% of Multiracial students, 42.9% of Native American students, 39.9% of Caucasian students, and 34.4% of Asian students.

## BMI CLASSIFICATIONS BY GRADE

Figure 6 illustrates the percentage of students whose BMI measurement was classified as overweight or obese by grade level. Findings indicate that 36.1% of kindergarten students entered the school system either overweight or obese. The percentage of students' BMI measurements classified as overweight or obese increased with increasing grade level until grade 6, where it slowly declined to 44.8% in grade 10.

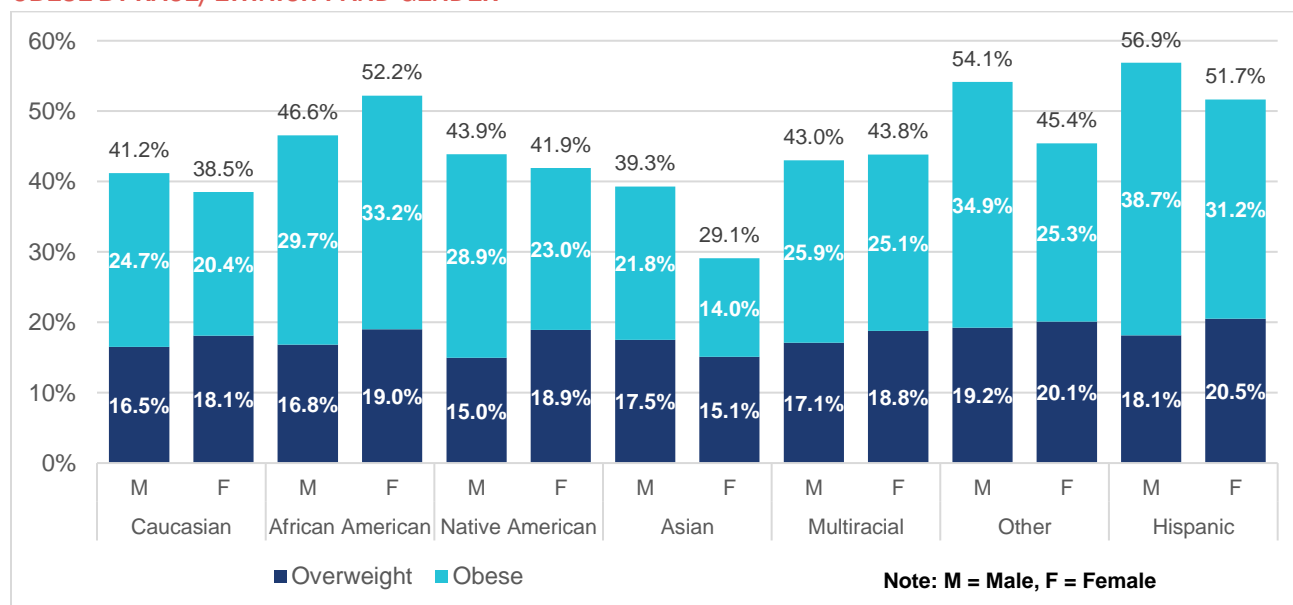

## BMI CLASSIFICATIONS BY RACE/ETHNICITY AND GENDER

When evaluating results by race/ethnicity and gender, Hispanic boys had the highest combined percentage of BMI measurements classified as overweight or obese. More than half (56.9%) of Hispanic boys' BMI measurements were classified as either overweight or obese (see Figure 7). In most other race/ethnicity groups, boys had a higher total percentage of overweight or obese BMI classifications when compared with girls, with the exception of African Americans. Total percentages of Multiracial boys and girls with BMI measurements in the overweight or obese category were nearly identical. Among female students, the highest percentage of students with measurements classified as overweight or obese was found in African Americans at 52.2%, followed by Hispanics at 51.7%.

The greatest difference between male students and female students within a race/ethnicity group was among Asian students, where 29.1% of girls were in the two highest BMI categories compared with 39.3% of boys.

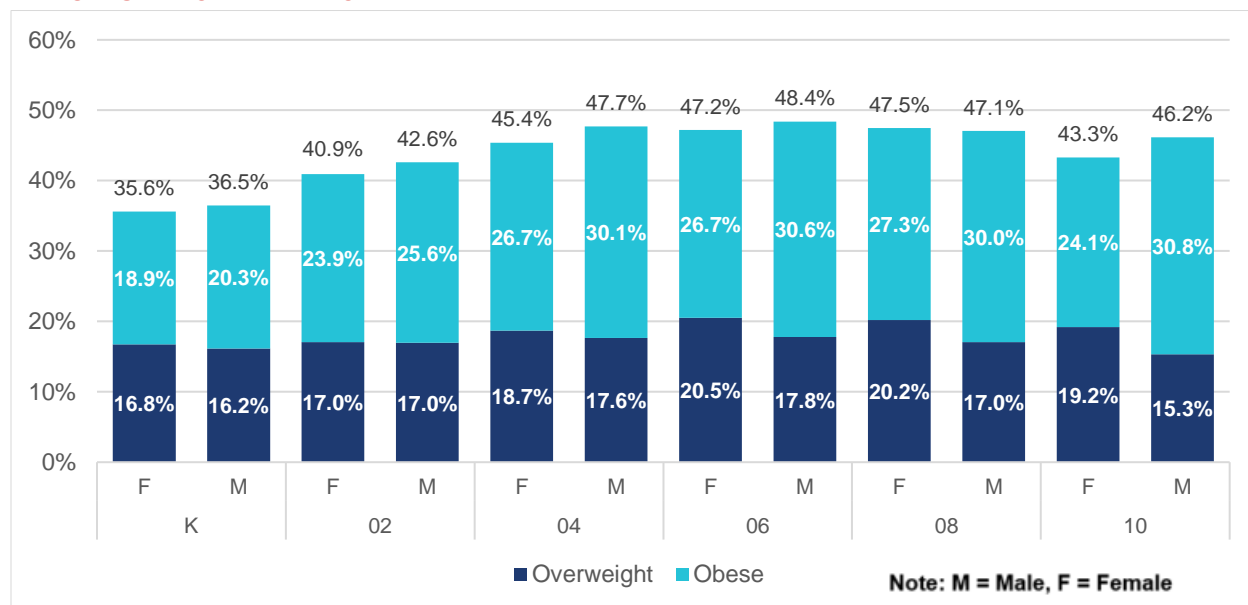

**FIGURE 7. YEAR 18 PERCENTAGE OF STUDENT BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY RACE/ETHNICITY AND GENDER**

## BMI CLASSIFICATIONS BY GRADE AND GENDER

As illustrated in Figure 8, data show that a slightly higher percentage of boys (36.5%) than girls (35.6%) enter school with BMI measurements classified as either overweight or obese in kindergarten. In the second grade, the difference continues, as a slightly greater percentage of male students (42.6%) than female students (40.9%) were classified in the overweight or obese category. In the fourth grade, the difference between boys and girls was more pronounced than most other grades, with 47.7% of male students and 45.4% of female students in the two highest BMI categories. In the sixth grade, male students' BMI measurements were slightly higher than female students (48.4% and 47.2%, respectively) for the total overweight and obese categories. In the eighth grade, the difference between boys and girls was only slightly higher for female students at 47.5% and 47.1% for boys. In the tenth grade, the difference between boys and girls is the highest in the combined overweight and obese BMI categories among all grade levels (46.2% and 43.3% respectively).

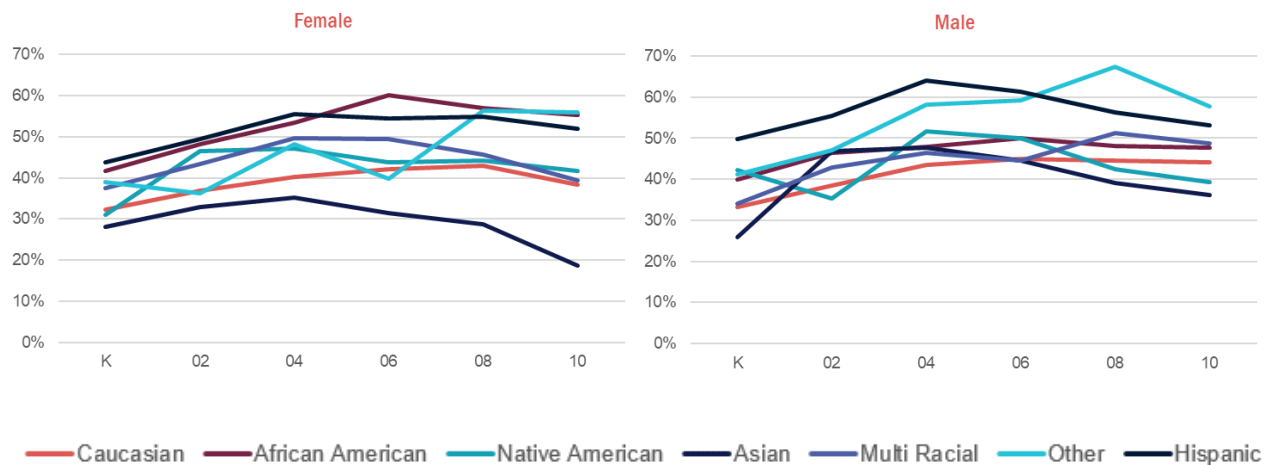

**FIGURE 8. YEAR 18 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GRADE AND GENDER**

## BMI CLASSIFICATIONS BY GENDER, GRADE, AND RACE/ETHNICITY GROUP

Analysis of the BMI data shows that some groups of students face a heightened risk for childhood obesity. The highest percentage of BMI measurements classified as obese was found among Hispanic boys, especially in the fourth grade, where 64.0% were classified as either overweight or obese (see Figure 9 and Table 2).

**FIGURE 9. YEAR 18 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GENDER, RACE/ETHNICITY, AND GRADE**

**TABLE 2. YEAR 18 PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GENDER, RACE/ETHNICITY AND GRADE**

	Female							Male						
	Caucasian	African American	Native American	Asian	Multi-Racial	Other	Hispanic	Caucasian	African American	Native American	Asian	Multi-Racial	Other	Hispanic
<b>K</b>	32.2%	41.7%	31.0%	28.1%	37.6%	38.9%	43.7%	33.3%	39.9%	42.2%	25.9%	34.0%	41.2%	49.7%
<b>2</b>	36.9%	48.1%	46.5%	32.9%	43.4%	36.4%	49.5%	38.5%	46.5%	35.3%	46.9%	42.8%	47.1%	55.5%

## TRENDS IN STUDENT BMI

Data from the past five years of BMI screenings (see Figure 10) reveal that the distribution of students in each of the four categories (underweight, healthy weight, overweight, and obese) has remained steady until the most recent measurement year. As indicated in the executive summary and Figure 1 in this report, the most recent measurements indicate a marked increase in the proportion of students with a BMI classification of obese, and a slight increase in the proportion of students in the overweight category.

**FIGURE 10. TRENDS IN BMI CLASSIFICATIONS FOR ARKANSAS PUBLIC SCHOOL STUDENTS**

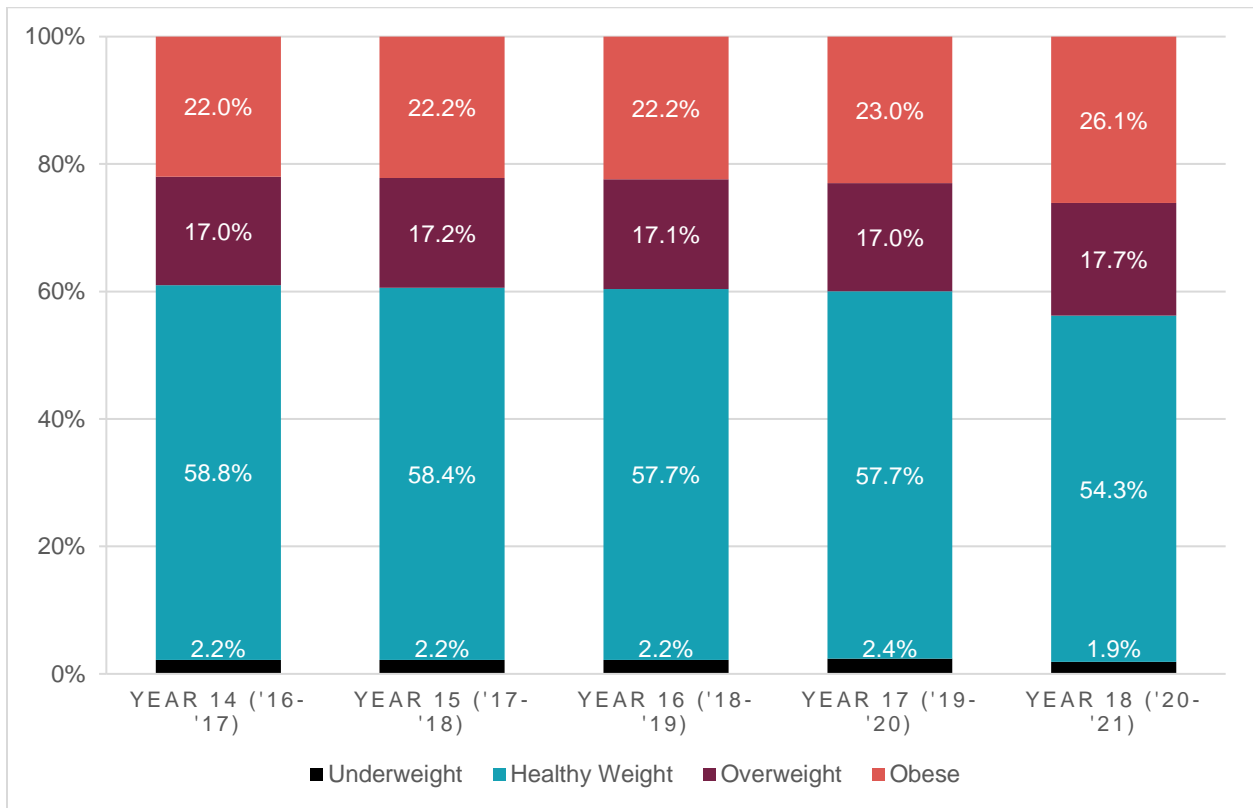

Figure 11 illustrates the trends of students with BMI measurements classified as overweight and obese at kindergarten and at grade 10 over the 18 years data has been collected. There has been modest improvement in the percentages of students classified as overweight and obese entering kindergarten from Year 1 (32.6%) to Year 17 (31.2%) until Year 18 where the percentage increased sharply to an 18-year high of 36.1%. Similarly, the percentage of students who are classified as either overweight or obese in grade 10 is at a 18-year high of 44.8%, up six percentage points from the initial grade 10 assessment of 38.6% in Year 1.

**FIGURE 11. PERCENTAGE OF STUDENTS WITH BMI MEASUREMENTS CLASSIFIED AS OVERWEIGHT AND OBESE BY GRADE, YEAR 1 THROUGH YEAR 18**

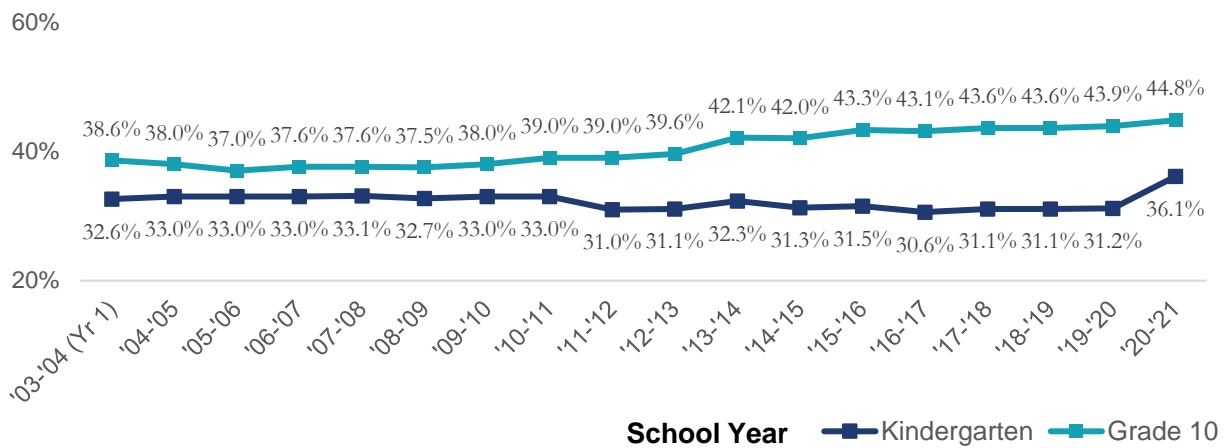

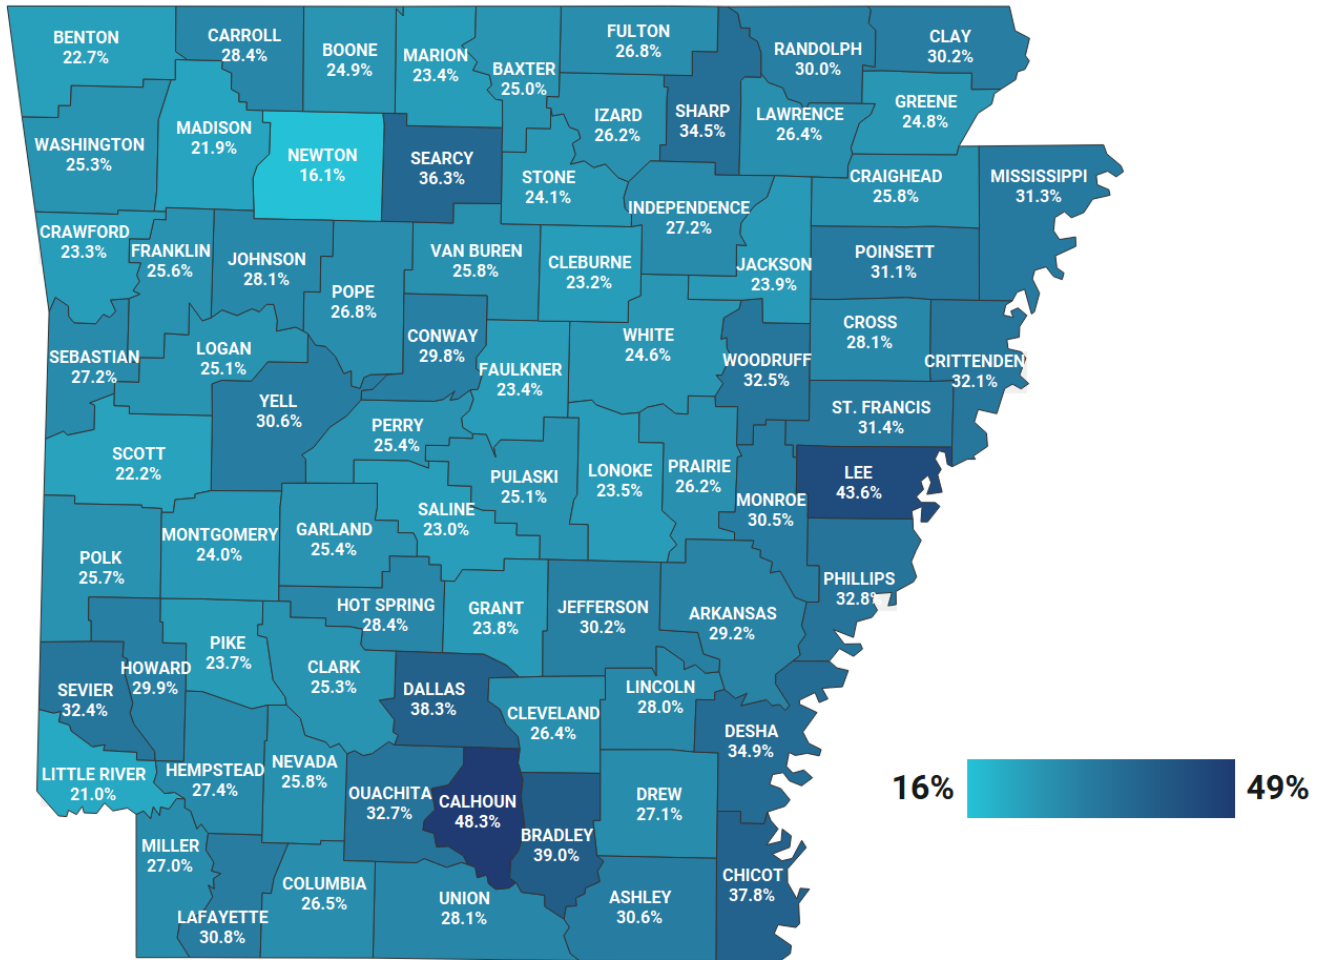

Figure 12 on the following page displays the percent of students with a BMI classification of obese, from among schools located in each county. Calculations are based on valid measurements among students in even grades Kindergarten through 10<sup>th</sup> grade. Newton County had the lowest percentage of valid measurements classified as obese, at 16.1%, while Calhoun County had the highest percentage at 48.3%. While all county level data meets minimum thresholds for inclusion based on individual counts of students, some rural counties experienced relatively low numbers of eligible students having valid measurements in the most recent year.

**FIGURE 12. PERCENTAGE OF STUDENTS CLASSIFIED AS OBESE, BY COUNTY LOCATION OF SCHOOL, FOR THE 2020–21 SCHOL YEAR**

## Conclusion

Nearly 44% of Arkansas public school students who had a BMI measurement in the 2020–2021 school year are classified as either overweight or obese, up from 40% in the 2019–2020 school year. BMI measurements in 2020–2021 indicated the highest percentages of grade-level obese classifications since student BMI measurement began in Arkansas. This increase coincides with the first wave of the COVID-19 pandemic in Arkansas, and it underscores the need for continued efforts to address child health and wellness. Statewide, collaborative efforts will be needed in the future to achieve the goal of increasing the percentage of adults, adolescents, and children who are at a healthy weight. Continued state and local efforts are needed to address focus areas previously designated by the Healthy Active Arkansas initiative, including physical and built environment; nutritional standards in government, institutions, and the private sector; nutritional standards in schools; physical education and activity in schools; healthy worksites; access to healthy foods; sugar-sweetened beverage reduction; and breastfeeding.

## Appendix A: BMI Classification by School

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined. Schools with valid measurements for less than 80% of enrolled students are not reported in this school-level appendix.

District LEA	District Name	School LEA	School Name	Under-weight (%)	Healthy Weight (%)	Under-weight and Healthy Weight (%)	Over-weight (%)	Obese (%)	Over-weight and Obese (%)

## Appendix B: BMI Classification by School District

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined.

School District	District LEA	Underweight (%)	Healthy Weight (%)	Underweight and Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)

## Appendix C: BMI Classification by County

Note: In order to protect private health information (see the Federal Health Insurance Portability and Accountability Act of 1996), and in compliance with common statistical reporting practices, if fewer than five students are in a BMI classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools and districts with fewer than five students classified as overweight or obese, these two groups are combined.

County	Underweight (%)	Healthy Weight (%)	Overweight (%)	Obese (%)	Overweight and Obese (%)
