Student and School Participation in the BMI Initiative

In the 2008-2009 school year, 98.4 percent (1,066 of 1,083) of Arkansas public schools, in 259 of 264 school districts, participated in the statewide BMI assessments. These totals include BMI assessments that were submitted by July 15, 2010 for 215,243 of the state's 220,532 public school students enrolled in grades K, 2, 4, 6, 8 and 10. Among students for whom data was reported, 82.7 percent (178,015) had appropriate data to allow BMI calculation.

**Table 1: 2009-2010 Statewide Participation in BMI Assessments
(Students in Grades K, 2, 4, 6, 8 and 10)**

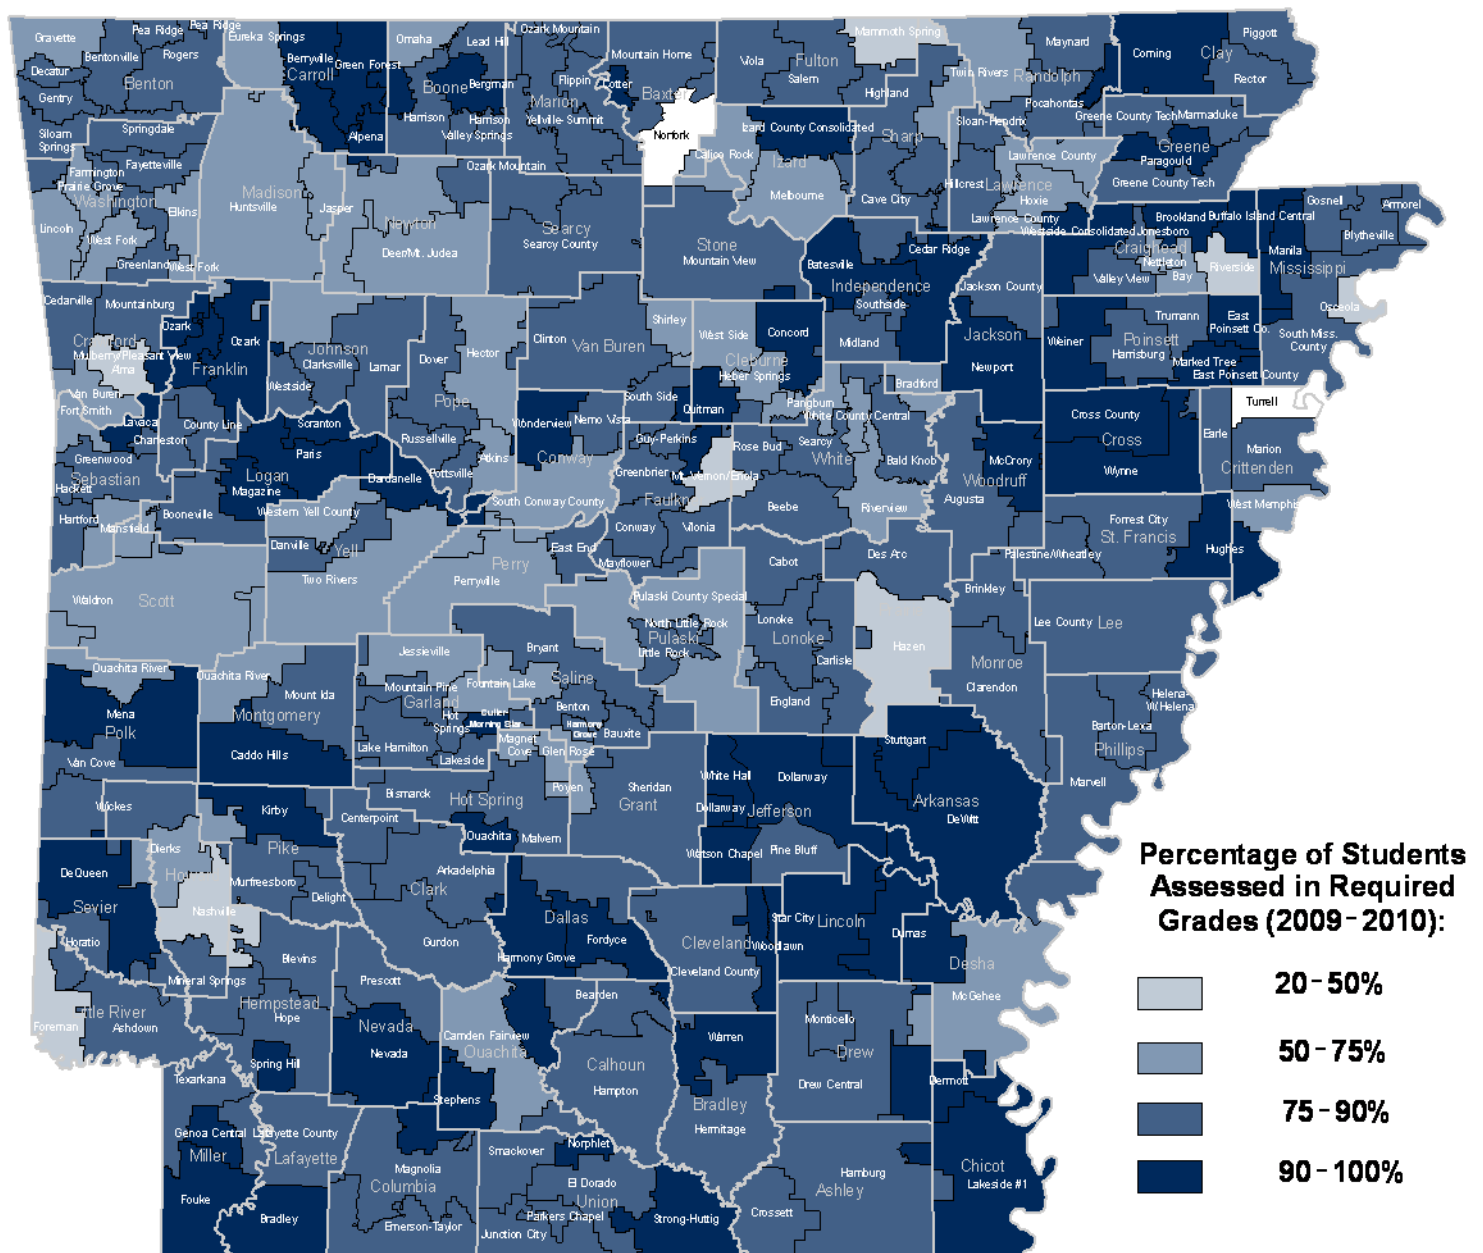

Report Year	Participation		Total Students Participating	Student Data		
	Public Schools	Students in Grades K, 2, 4, 6, 8, 10		Valid for Analysis	Invalid	Unable to Assess
	Percent Number/Total	Percent Number/Total		Percent Number	Percent Number	Percent Number
Year 5 ('07-'08)	99.2% 1,069 of 1,078	98.5% 217,601 of 220,946	217,601	81.9% 178,182	0.038% 82	18.0% 39,337
Year 6 ('08-'09)	98.7% 1,072 of 1,086	97.9% 216,871 of 221,583	216,871	82.5% 179,007	0.1% 291	17.3% 37,573
Year 7 ('09-'10)	98.4% 1066 of 1083	97.6% 215,243 of 220,532	215,243	82.7% 178,015	.02% 33	17.3% 37,195

Results include all data available for years 5, 6 and 7 for grades K, 2, 4, 6, 8 and 10, received by July 15, 2009. The most common reason students were not assessed for BMI was absence from school. Reasons students could not be assessed are detailed in Figure 1. Fluctuation in the total number of public schools each year is due to school closings, new school openings and mergers. Only schools with students in even-number grades were included in this report.

Note: Results for earlier years (1– 4) are available in the year 4, 5 and 6 statewide reports, available at www.achi.net.

Map 1: 2009-2010 Percentage of Students Assessed by Arkansas Public School District (Students in Grades K, 2, 4, 6, 8 and 10)

Student assessment rates varied from 30 percent to 99 percent of student enrollment in required grades. High participation rates allow confidence in the results reported by school and school districts. For those schools or school districts with low participation rates, under-reporting of select categories is possible. Results are reported for 258 of 264 Arkansas school districts

Reasons Students Could Not be Assessed

To complete the BMI assessments, schools collected each student’s name, address, grade, gender, ethnicity, and birth date along with his/her height and weight measurements.

Approximately one in 6 students (37,195) could not have their BMIs calculated, usually because they were absent on the day of assessment. Other reasons that students were classified as “unable to assess” include physical disability, students’ or parents’ refusal to participate, and inability to obtain accurate measurements. Less than one-tenth of one percent (33) of students who participated in the assessment process had “invalid” data, meaning that the information reported could not be used to calculate a BMI.

**Figure 1: 2009-2010 Student BMI Assessment
(Students in Grades K, 2, 4, 6, 8 and 10)**

Special Circumstances for Reporting

The results section of this report includes statewide BMI percentages of underweight, healthy weight, overweight and obese students for selected demographic subgroups. Percentages for these four classifications are also reported for the majority of districts and counties in the state (see Appendices).

However, to protect private health information (based on rules in the federal Health Insurance Portability and Accountability Act of 1996) and in compliance with common statistical reporting practices, if less than five students are in a particular classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools with less than five students in the overweight or obese classifications, these two groups are combined.

Due to the large number of students assessed, results by gender, ethnic groups, and grade were included in this report that are not available from any other source in the nation.

Statewide Results of the Arkansas BMI Assessments

The total public school enrollment in grades K, 2, 4, 6, 8 and 10 for the 2009-2010 school year, reported by the Arkansas Department of Education, was 220,532 students enrolled in 1,083 schools within 264 school districts. Statewide results presented in this section of the report are based only on the data from 178,015 individual students (enrolled in grades K, 2, 4, 6, 8 or 10) with valid BMI assessments that were reported prior to July 15, 2010 by 1,066 schools in 259 school districts.

BMI Classifications for All Students

Data from three consecutive years of BMI screenings reveal that the percentage of students in each of the four classifications (underweight, healthy weight, overweight and obese (as defined by the Centers for Disease Control and Prevention) has remained level. Thirty-eight percent of Arkansas children and adolescents have a potential obesity problem and face health risks associated with being overweight.

Note: Results for earlier years (1– 4) are available in the year 4, 5 and 6 statewide reports, available at www.achi.net.

Figure 2: 2009-2010 Trends in BMI Classification for Arkansas Public School Students (Students in Grades K, 2, 4, 6, 8 and 10)

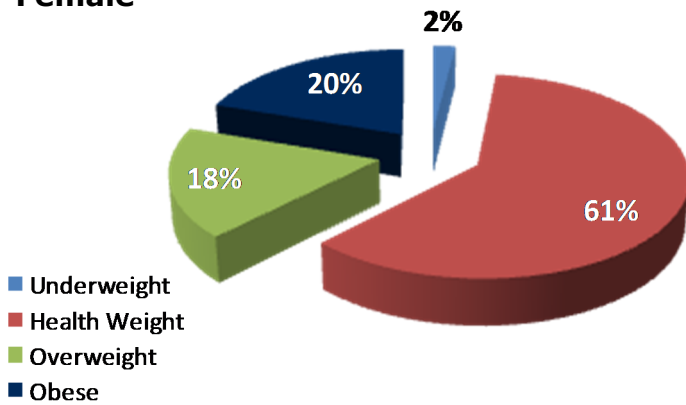

BMI Classifications by Gender

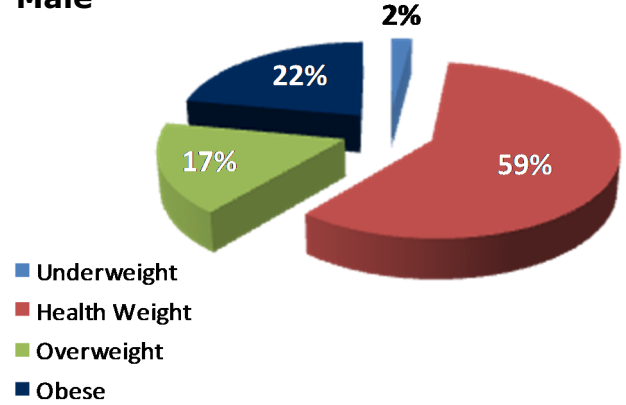

Slightly more males (22 percent) than females (20 percent) were classified as obese. In the overweight classification there were more females (18 percent) than males (17 percent). The percentage of underweight students was similar for both genders (2 percent).

Figure 3: 2009-2010 BMI Classification by Gender
(Students in Grades K, 2, 4, 6, 8 and 10)

Female

Male

BMI Classifications by Ethnic Group

With 47 percent of Hispanic students classified as either obese or overweight, they had the highest obesity burden among students compared with Whites, African Americans, Asians, or Native Americans. Among Native American students, 39 percent were in the two highest risk categories, and 42 percent of African American students were obese or overweight. The percentage of White students who were obese or overweight was 36 percent and among Asian students 31 percent were classified as obese or overweight. Asians had the highest percentage of students classified as underweight at 3 percent.

Figure 4: 2009-2010 BMI Classification by Ethnic Group
(Students in Grades K, 2, 4, 6, 8 and 10)

BMI Classifications by Gender and Ethnic Group

Hispanic males had the highest obesity risks when evaluating results by ethnic group and gender. Half (50 percent) of Hispanic males were classified as obese or overweight. The obesity risk was lower among African American, Native American and Asian males, each at 39 percent. The lowest risk among males was found in Whites at 34 percent.

The highest obesity risk among females was found in African Americans (45 percent) followed closely by Hispanic females (44 percent). Native American females had an obesity risk of 38 percent while 34 percent of White females, and 25 percent of Asian females were classified as obese or overweight.

A higher percentage of males than females had BMI measurements in the two heaviest categories in all ethnic groups except African Americans. The greatest difference between males and females within an ethnic group was among Asian students where 25 percent of females were in the two heaviest categories compared to 39 percent of males.

Figure 5: 2009-2010 BMI Percent of Students Classified as Obese or Overweight by Gender and Ethnic Group
(Students in Grades K, 2, 4, 6, 8 and 10)

BMI Classifications by Grade

Data for grades K, 2, 4, 6, 8 and 10 show that 33 percent of kindergartners entered the school system either obese or overweight. The percentage of students who were obese or overweight increased to 35 percent for second-graders, to 40 percent for those in the fourth grade, and peaked at 44 percent with the sixth grade class. The prevalence of obesity diminishes slightly in subsequent years, down to 41 percent for eighth-graders and then to 38 percent for those in the tenth grade.

Figure 6: 2009-2010 Percent of Students Classified as Obese or Overweight by Grade (Students in Grades K, 2, 4, 6, 8 and 10)

BMI Classifications by Gender and Grade

Across grades K, 2, 4, 6, 8 and 10, a slightly greater percentage of males than females were classified in the overweight or obese categories. The difference was most pronounced in the tenth grade where 39 percent of males and 36 percent of females were in the two highest risk categories.

Figure 7: 2009-2010 Percent of Students Classified as Obese or Overweight by Gender and Grade (Students in Grades K, 2, 4, 6, 8 and 10)

BMI Classifications by Gender, Ethnic Group and Grade

Analysis of the BMI assessments shows that some groups of students face a heightened risk for childhood obesity. The highest obesity rates were found among Hispanic males, especially in the sixth grade where nearly 60 percent were classified as overweight or obese.

**Figure 8: 2009-2010 Percent of Students Classified as Obese or Overweight by Gender, Ethnic Group and Grade
(Students in Grades K, 2, 4, 6, 8 and 10)**

School District Results

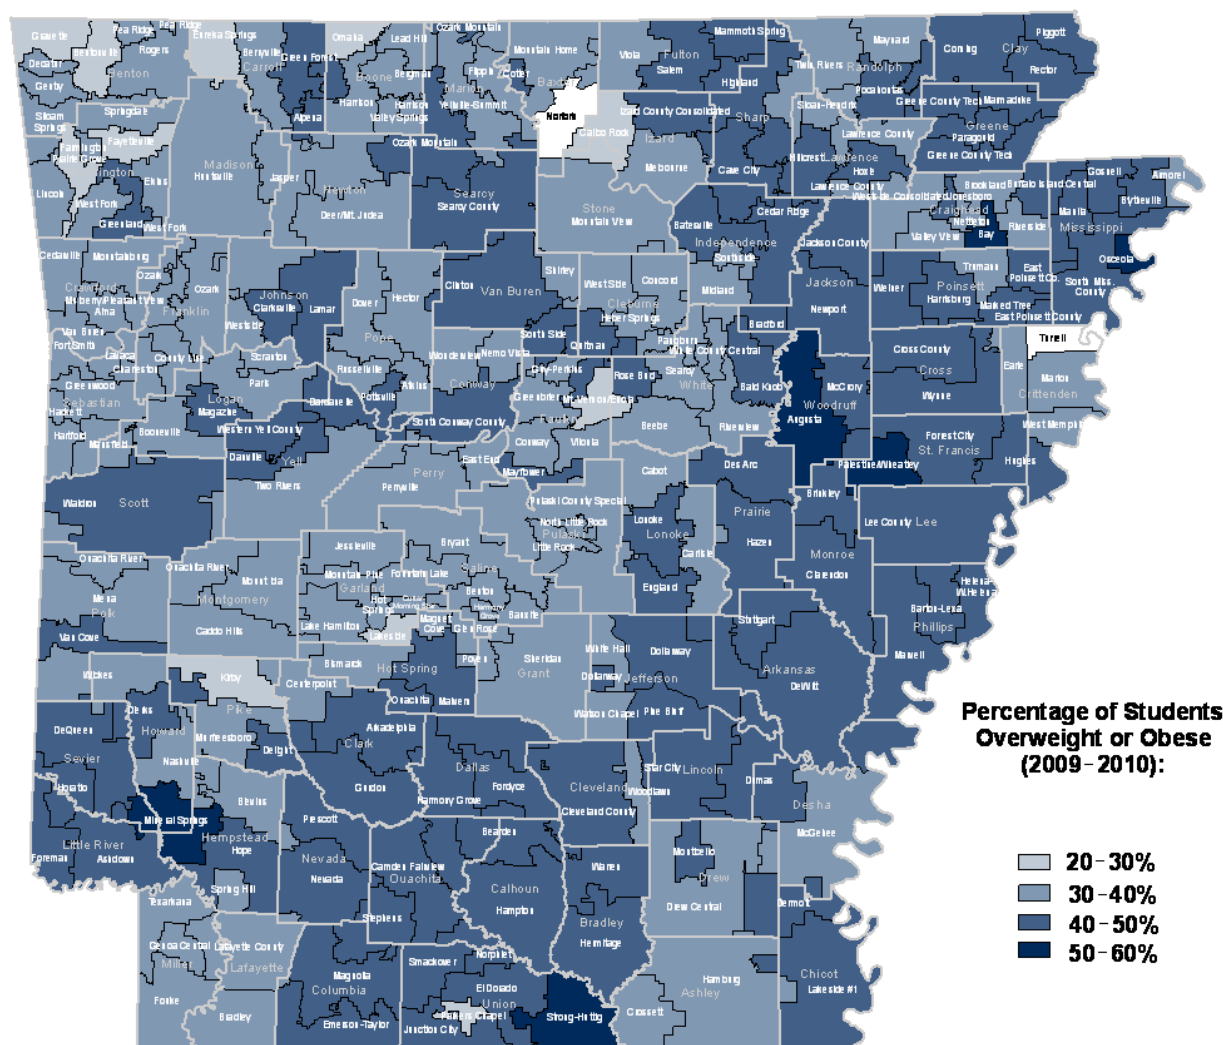

As shown on the map below, childhood obesity is a problem in every county in Arkansas. The map is shaded according to the magnitude of the percentage of students assessed as overweight or obese. The lightest shade represents the districts with the lowest percentage (20-30 percent) and the darkest shade represents those with the highest percentage (50-60 percent) of students classified as overweight or obese.

Among the districts reporting results, 14 school districts had 20 to 30 percent of their students classified as overweight or obese, 128 school districts had rates of 30 to 40 percent, 109 school districts had rates of 40 to 50 percent, and 7 school districts had 50 percent or more of their students in the two highest risk categories.

Of the 14 school districts that fall within the lowest range for percentage of students classified as overweight or obese, five submitted BMI assessments for less than two-thirds of its students. Therefore, the map may not reflect accurate results for some of these school districts.

(Note that 16 districts including those with special school classifications are not displayed on the map because of their small geographic size.)

Map 2: 2009-2010 Percentage of Students Overweight or Obese by Arkansas Public School District (Students in Grades K, 2, 4, 6, 8 and 10)

BMI Data Collection

Aggregate child BMI assessments presented in this report are an excellent indication of the extent of the current problem of childhood and adolescent obesity in Arkansas schools, school districts, and the state. The data presented in this report serve as a warning about the potential future health problems that Arkansans may face as these children become adults.

Process

As required by Act 1220 of 2003, student BMI measurements are taken by a trained school or student-health professional. The measurement process is conducted privately, with the child facing away from the scale. Results are entered into a secure, web-based computer system capable of generating individual, confidential Child Health Reports for parents once data are entered. All students in even-numbered grades, kindergarten through 10th, are measured unless the parent provides the school with a written refusal, or the child is absent from school.

Definition of BMI

The BMI is a ration of weight and height, and is a better assessment of obesity than weight alone. Using an accurate weight and height, BMI is calculated using the following formula:

$$\text{BMI} = \frac{\text{Weight in pounds}}{(\text{Height in inches})^2} \times 703$$

Boys and girls grow and develop at different rates. Based upon Centers for Disease Control

and Prevention (CDC) recommendations, a BMI percentile for children is calculated individually for each boy and girl based upon his or her gender, age, height, and weight. BMI percentiles are then used to categorize children according to whether they are underweight, healthy weight, overweight, or obese.

A higher BMI indicates greater risk for having or developing obesity-related health problems. Health care professionals group BMI percentiles to categorize overweight children as follows.

Obese: BMI-for-age greater than or equal to 95th percentile.

Overweight: BMI-for-age between 85th and less than 95th percentiles.

Healthy Weight: BMI-for-age between 5th and less than 85th percentiles.

Underweight: BMI-for-age less than 5th

A BMI assessment is only a screening tool and an individual child's BMI should not be considered a final indicator of whether or not a child has a weight problem that requires attention. Further evaluation by a health professional is the recommended next step for a child who is classified as overweight or obese. However, BMI is the most widely accepted measurement used to screen for weight-related health problems. In a 2003 policy statement, the American Academy of Pediatrics recommended that every child every year have his or her BMI assessed. The Institute of Medicine in its 2005 report also recommended that schools conduct annual BMI assessments and make this information available to parents.

Overview of BMI Reports

Child Health Reports

Confidential Child Health Reports were generated and were made available through schools for each student's parent or guardian. The reports explained why Arkansas assesses students' BMIs, described the BMI screening process, educated parents about potential obesity-related health risks facing their children, and provided simple suggestions to help families improve nutrition and increase physical activity. Depending on the students' information, the report included the student's height, weight, and BMI and a classification as underweight, healthy weight, overweight, obese, or unable to assess. In addition, these five types of reports were translated into Spanish for those students whose records indicated that Spanish was the primary language spoken at home. Sample Child Health Reports are available on the ACHI website at www.achi.net.

School Reports

BMI profile reports are available on-line to each school once BMI data entry has been completed. These reports, which are also available on the ACHI website (www.achi.net), describe the extent to which the school is being affected by the obesity epidemic. BMI classifications for the school are presented for male and female students by grade and collectively for all students. BMI classification results for individual schools in Arkansas are presented in Appendix A.

School District Reports

School district reports combine information from all available school data in that district. Summary statistics for each school within the district and overall results for the district provide a community assessment of the environmental impact of obesity on public school students.

Additional information, similar to that included in the school report, is depicted using both tables and charts. (School district reports are available at www.achi.net.) Results for BMI classifications of students in individual school districts in Arkansas are presented in Appendix B.

Statewide Report

In this statewide report, results are presented for all students with a valid BMI. Additionally, results are presented by various demographic characteristics, including gender, ethnic group, and grade. Overall BMI classifications for students by county are shown in Appendix C.
