BMI Data Collection

Aggregate child body mass index (BMI) assessments presented in this report are an excellent indication of the extent of the current problem of childhood and adolescent obesity in Arkansas schools, school districts, and the state. The data presented in this report serve as a warning about the potential future health problems that Arkansans may face as these children become adults.

Process

As required by Act 1220 of 2003, student BMI measurements are taken by trained school personnel or student-health professionals. The measurement process is conducted privately, with the child facing away from the scale. Results are entered into a secure, web-based computer system capable of generating individual, confidential Child Health Reports for parents once data are entered. All students in even-numbered grades, kindergarten through 10th, are measured unless the parent provides the school with a written refusal, the child is absent from school, or for another specified reason.

Definition of BMI

The BMI is a ratio of weight and height and is a better assessment of obesity than weight alone. Using an accurate weight and height, BMI is calculated using the following formula:

$$\text{BMI} = \frac{\text{Weight in pounds}}{(\text{Height in inches})^2} \times 703$$

Boys and girls grow and develop at different rates. Based upon the Centers for Disease Control and Prevention (CDC) recommendations,

a **BMI percentile** for children is calculated individually for each boy and girl based upon his or her gender, age, height, and weight. BMI percentiles are then used to categorize children according to whether they are underweight, healthy weight, overweight, or obese.

Obese: BMI-for-age greater than or equal to 95th percentile.

Overweight: BMI-for-age between 85th and less than 95th percentiles.

Healthy weight: BMI-for-age between 5th and less than 85th percentiles.

Underweight: BMI-for-age less than 5th percentile

A higher BMI indicates greater risk for having or developing obesity-related health problems. Health care professionals group BMI percentiles to categorize children as follows.

A BMI assessment is only a screening tool and an individual child's BMI should not be considered a final indicator of whether or not a child has a weight problem that requires attention. Further evaluation by a health professional is the recommended next step for a child who is classified as overweight or obese. However, BMI is the most widely accepted measurement used to screen for weight-related health problems. In a 2003 policy statement, the American Academy of Pediatrics recommended that every child every year have his or her BMI assessed. The Institute of Medicine in its 2005 report also recommended that schools conduct annual BMI assessments and make this information available to parents.

Overview of BMI Reports

Child Health Reports

Confidential Child Health Reports were generated and made available through schools for each student's parent or guardian. The reports explained why Arkansas assesses students' BMIs, described the BMI screening process, educated parents about potential obesity-related health risks facing their children, and provided simple suggestions to help families improve nutrition and increase physical activity.

Depending on the students' information, the report included the student's height, weight, and BMI and a classification as underweight, healthy weight, overweight, obese, or unable to assess. In addition, these five types of reports were translated into Spanish for those students whose records indicated that Spanish was the primary language spoken at home. Sample Child Health Reports are available on the ACHI website at www.achi.net.

School Reports

BMI profile reports are available on-line for each school once BMI data entry has been completed. These reports, which are also available on the ACHI website (www.achi.net), describe the extent to which the school is being affected by the obesity epidemic. BMI classifications for the school are presented for male and female students by grade and collectively for all students. BMI classification results for individual schools in Arkansas are presented in Appendix A.

School District Reports

School district reports combine information from all available school data in that district. Summary statistics for each school within the

district and overall results for the district provide a community assessment of the environmental impact of obesity on public school students.

Additional information, similar to that included in the school report, is depicted using both tables and charts. (School district reports are available at www.achi.net.) Results for BMI classifications of students in individual school districts in Arkansas are presented in Appendix B.

Statewide Report

In this statewide report, results are presented for all students with a valid BMI. Additionally, results are presented by various demographic characteristics, including gender, ethnic group, and grade. Overall BMI classifications for students by county are shown in Appendix C.

Student and School Participation in the BMI Initiative

In the 2011–2012 school year, 98.7 percent (1,058 of 1,072) of Arkansas public schools, in 254 of 258 school districts, participated in the statewide BMI assessments. Table 1 (below) provides information about school and student participation rates from the last four years of BMI statewide assessments. Map 1 (following page) provides a picture of participation rates by school district within each county. These totals include BMI assessments that were submitted by July 25, 2012 for 214,809 of the state’s 220,643 public school students enrolled in grades K, 2, 4, 6, 8, and 10. Among students for whom data was reported, 83.2 percent (178,631) had appropriate data to allow BMI calculation. (See the following section, *Reasons Students Could Not Be Assessed*, page 5).

**Table 1: 2008–2012 Statewide Participation in BMI Assessments
(Students in Grades K, 2, 4, 6, 8, and 10)**

Report Year	Participation		Student Data			
	Public Schools	Students (K, 2, 4, 6, 8, 10)	Total Students Participating	Valid for Analysis	Invalid	Unable to Assess
	Percent Number of Total	Percent Number of Total	Number	Percent Number	Percent Number	Percent Number
Year 6 ('08–'09)	98.7% 1,072 of 1,086	97.9% 216,871 of 221,583	216,871	82.5% 179,007	0.13% 291	17.3% 37,573
Year 7 ('09–'10)	98.4% 1,066 of 1,083	97.6% 215,243 of 220,532	215,243	82.7% 178,015	0.02% 33	17.3% 37,195
Year 8 ('10–'11)	98.2% 1,054 of 1,073	97.0% 214,670 of 221,371	214,670	83.3% 178,873	0.02% 42	16.7% 35,755
Year 9 ('11–'12)	98.7% 1,058 of 1,072	97.4% 214,809 of 220,643	214,809	83.2% 178,631	0.02% 43	16.8% 36,135

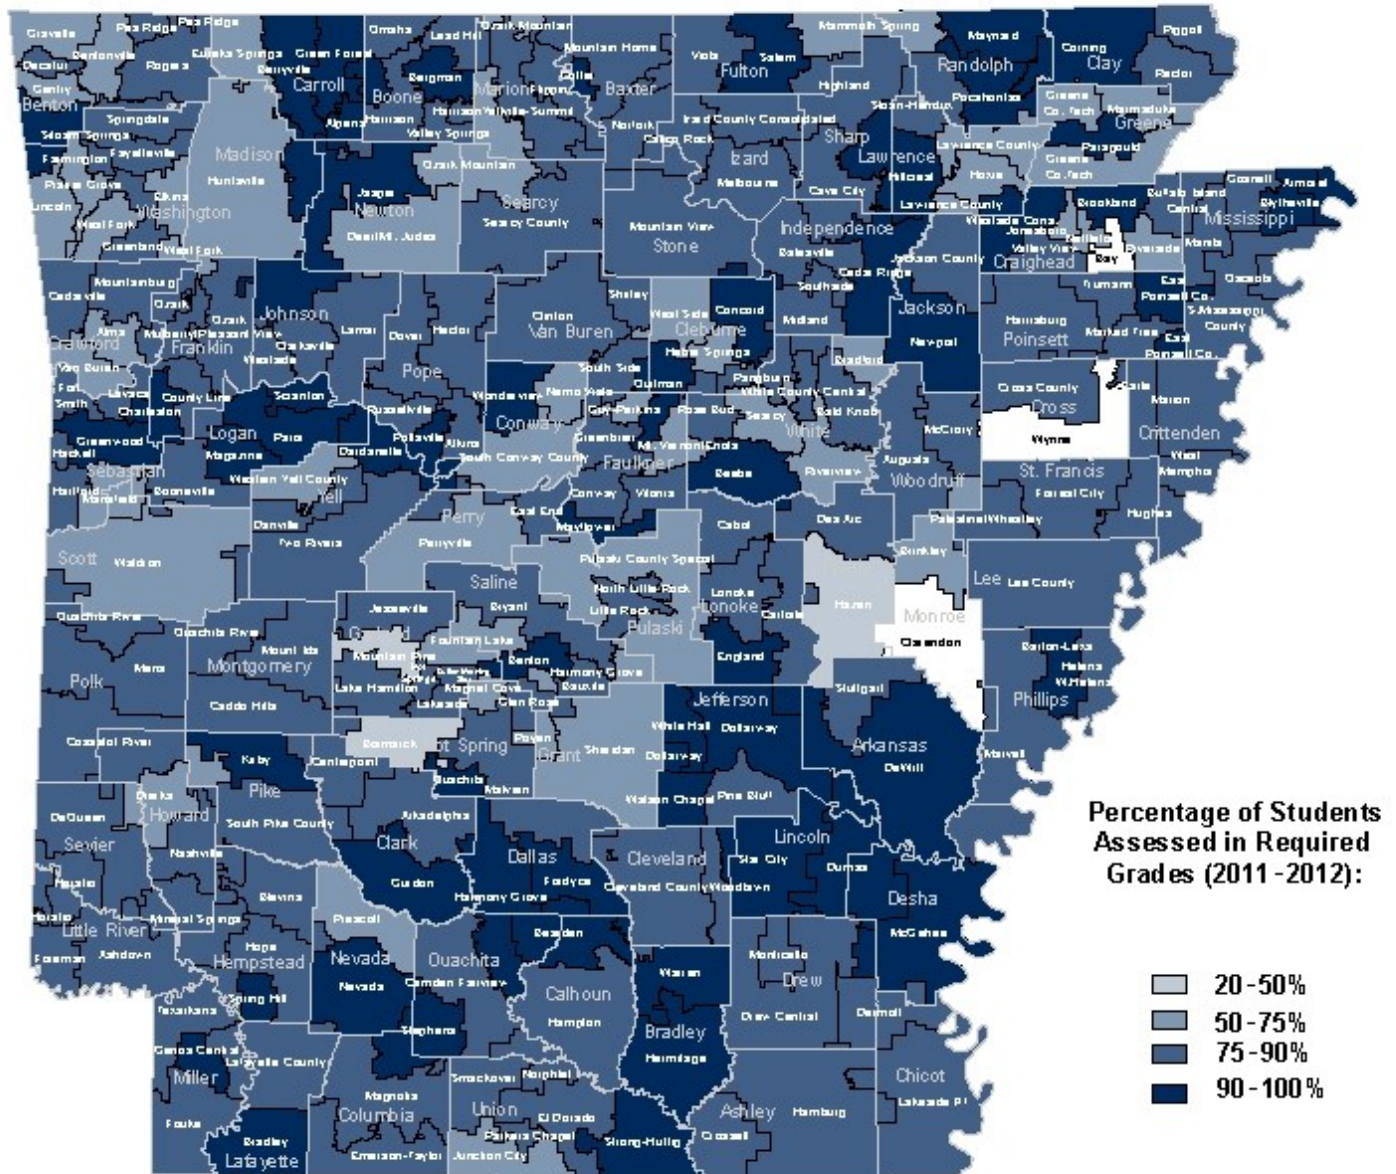

Results include all data available for years 6, 7, 8, and 9 for grades K, 2, 4, 6, 8, and 10, received by July 25, 2012. The most common reason students were not assessed for BMI was absence from school. Reasons students could not be assessed in year 9 are detailed in Figure 1 (page 5). Fluctuation in the total number of public schools each year is due to school closings, new school openings and mergers. Only schools with students in even-number grades were included in this report.

Note: Results for earlier years (1–5) are included in previous statewide reports, available at www.achi.net.

Map 1: 2011-2012 Percentage of Students Assessed in Arkansas Public School Districts (Students in Grades K, 2, 4, 6, 8, and 10)

Student assessment rates varied from 27 percent to 100 percent of student enrollment in required grades. High participation rates allow confidence in the results reported by school and school districts. For those schools or school districts with low participation rates, under-reporting of select categories is possible. Results are reported for 254 of 258 Arkansas school districts.

Note that 18 districts including those with special school classifications are not displayed on the map because of their small geographic size. School districts shown in white did not submit any data.

Reasons Students Could Not be Assessed

To complete the BMI assessments, schools collected each student’s height and weight measurements.

Approximately one in six students (36,135) could not have a BMI calculated. Missing data was due to absence on the day of the assessment for the greatest number of students, followed by parent refusal and child refusal, respectively. Other reasons that students were classified as “unable to assess” include physical disability or inability to obtain accurate measurements. Less than one percent (43) of students who participated in the assessment process had “invalid” data, meaning that the information reported could not be used to calculate a BMI.

**Figure 1: 2011–2012 Student BMI Assessment
(Students in Grades K, 2, 4, 6, 8, and 10)**

Special Circumstances for Reporting

The results section of this report includes statewide percentages of underweight, healthy weight, overweight and obese students for selected demographic subgroups. Percentages for these four classifications are also reported for the majority of districts and counties in the state (see Appendices).

However, to protect private health information (based on rules in the Federal Health Insurance Portability and Accountability Act of 1996) and in compliance with common statistical reporting practices, if less than five students are in a particular classification, then that group is either not reported or is combined with another group. For example, if fewer than five students are in the underweight category, this category is combined with the healthy weight group. Similarly, for some schools with less than five students classified as overweight or obese, these two groups are combined.

Statewide Results of the Arkansas BMI Assessments

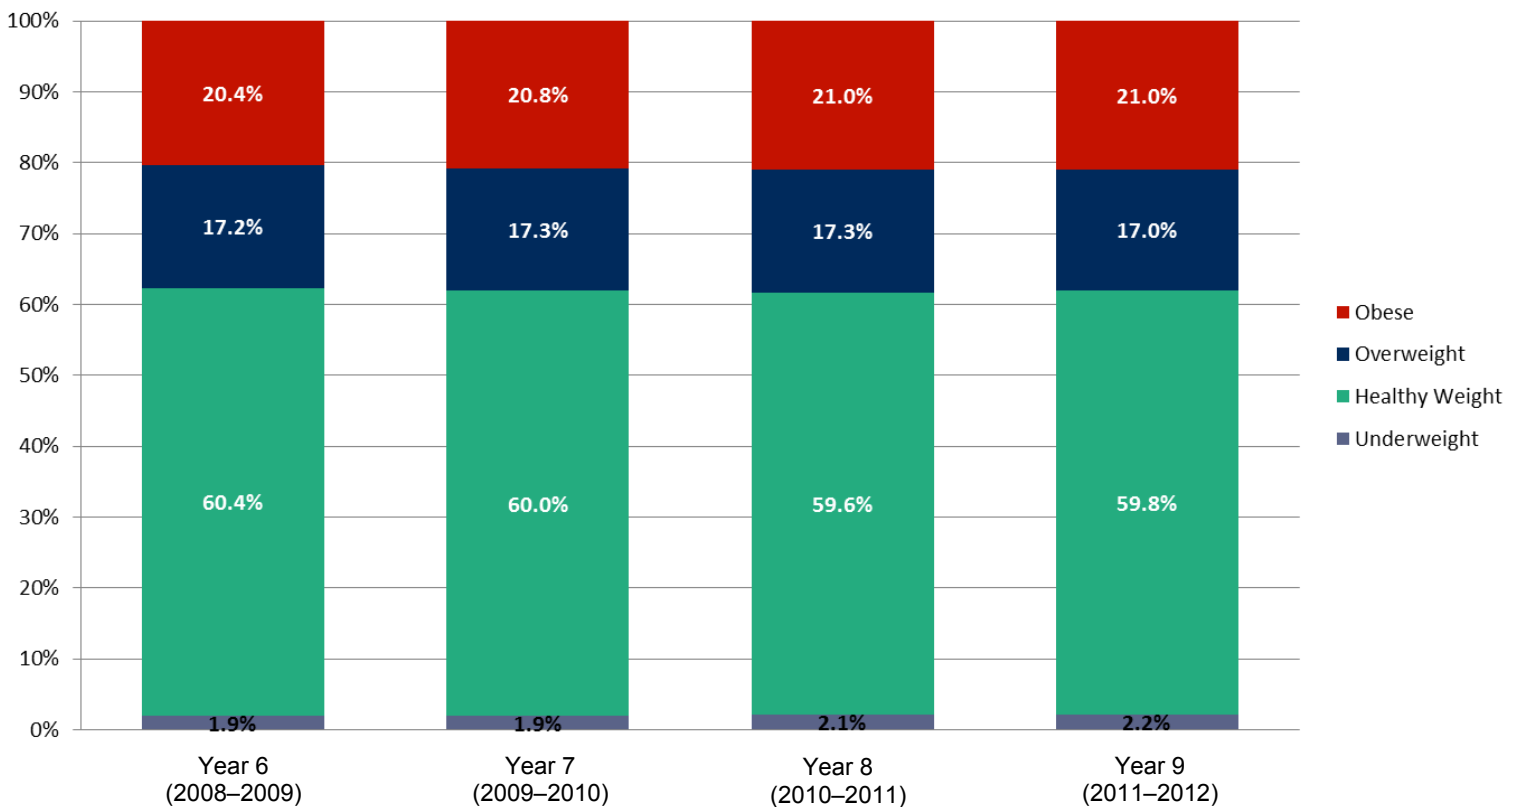

The total public school enrollment in grades K, 2, 4, 6, 8, and 10 for the 2011–2012 school year, reported by the Arkansas Department of Education, was 220,643 students enrolled in 1,072 schools within 258 school districts. Due to the large number of students assessed, results by gender, ethnic group, and grade were included in this report that are not available from any other source in the nation.

Statewide results presented in this section of the report are based only on the data from 178,631 individual students (enrolled in grades K, 2, 4, 6, 8, or 10) with valid BMI assessments that were reported prior to July 25, 2011 by 1,058 schools in 254 school districts.

BMI Classifications for All Students

Data from four consecutive years of BMI screenings reveal that the percentage of students in each of the four classifications (underweight, healthy weight, overweight and obese, as defined by the Centers for Disease Control and Prevention) has remained steady. Controlling for differences in gender, grade, and race/ethnicity, trend analyses between Years 6, 7, 8, and 9 revealed that there are no statistically significant differences in obesity rates across time. Thirty-eight percent of Arkansas children and adolescents have a potential obesity problem and face health risks associated with being overweight.

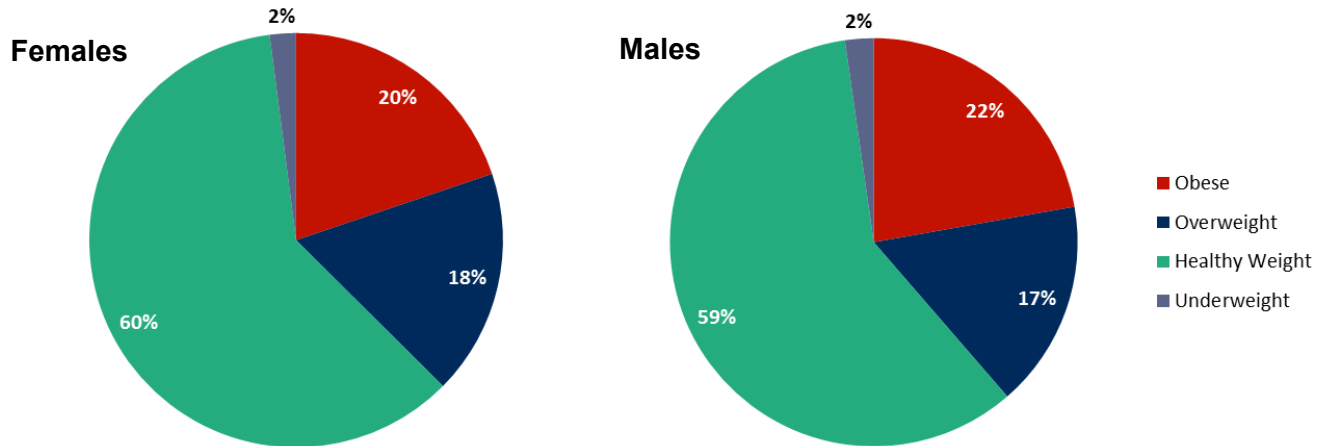

Figure 2: 2008–2012 Trends in BMI Classifications for Arkansas Public School Students (Students in Grades K, 2, 4, 6, 8, and 10)

BMI Classifications by Gender

Slightly more males (22 percent) than females (20 percent) were classified as obese. In the overweight classification there were more females (18 percent) than males (17 percent). The percentage of underweight students was similar for both genders (2 percent).

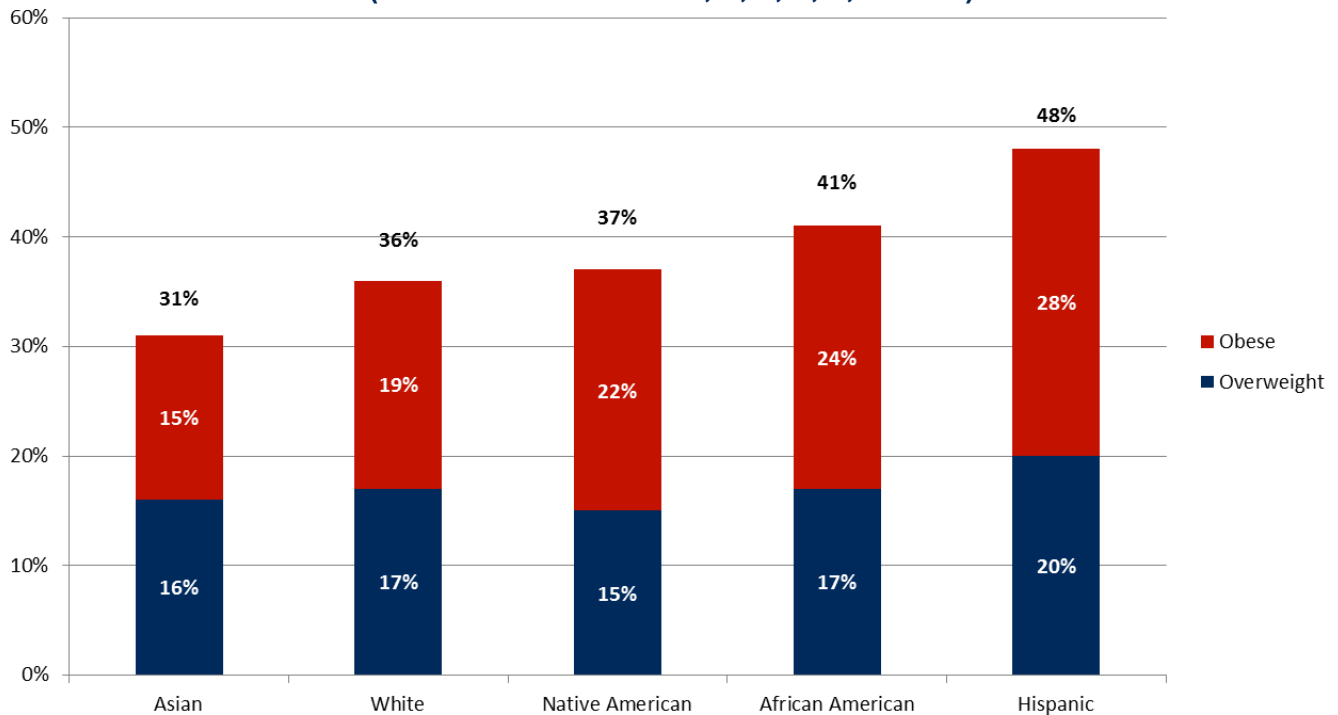

Figure 3: 2011–2012 BMI Classifications by Gender (Students in Grades K, 2, 4, 6, 8, and 10)

BMI Classifications by Ethnic Group

With 48 percent of Hispanic students classified as either obese or overweight, they had the highest obesity burden among students compared with Whites, African Americans, Asians, or Native Americans. Among African-American students, 41 percent were in the two highest risk categories, and 37 percent of Native-American students were obese or overweight. The percentage of White students who were obese or overweight was 36 percent and among Asian students 31 percent were classified as obese or overweight.

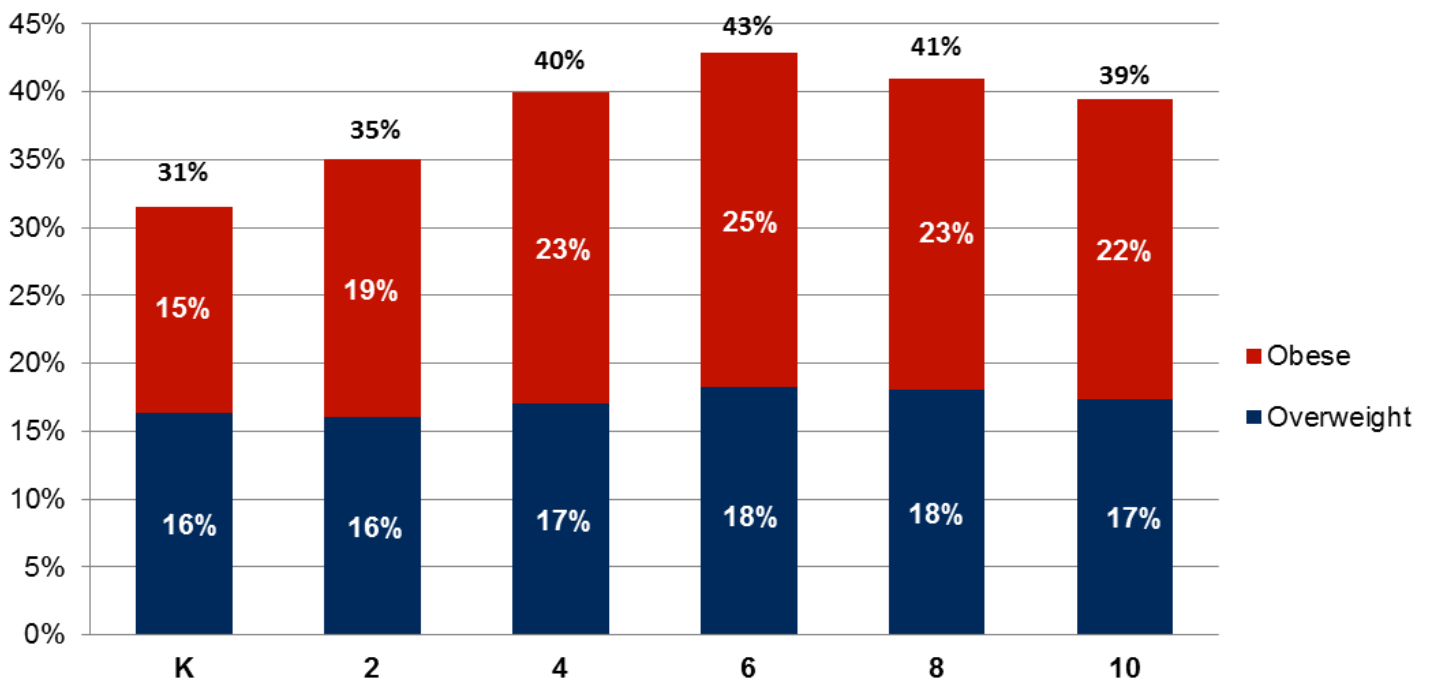

Figure 4: 2011–2012 BMI Classifications by Ethnic Group (Students in Grades K, 2, 4, 6, 8, and 10)

BMI Classifications by Grade

Data for grades K, 2, 4, 6, 8, and 10 show that 31 percent of kindergartners entered the school system either obese or overweight. The percentage of students who were obese or overweight increased to 35 percent for second-graders, to 40 percent for those in the fourth grade, and peaked at 43 percent with the sixth grade class. The prevalence of obesity diminishes slightly in subsequent grades, down to 41 percent for eighth-graders and then to 39 percent for those in the tenth grade.

**Figure 5: 2011–2012 Percentage of Students Classified as Obese or Overweight by Grade
(Students in Grades K, 2, 4, 6, 8, and 10)**

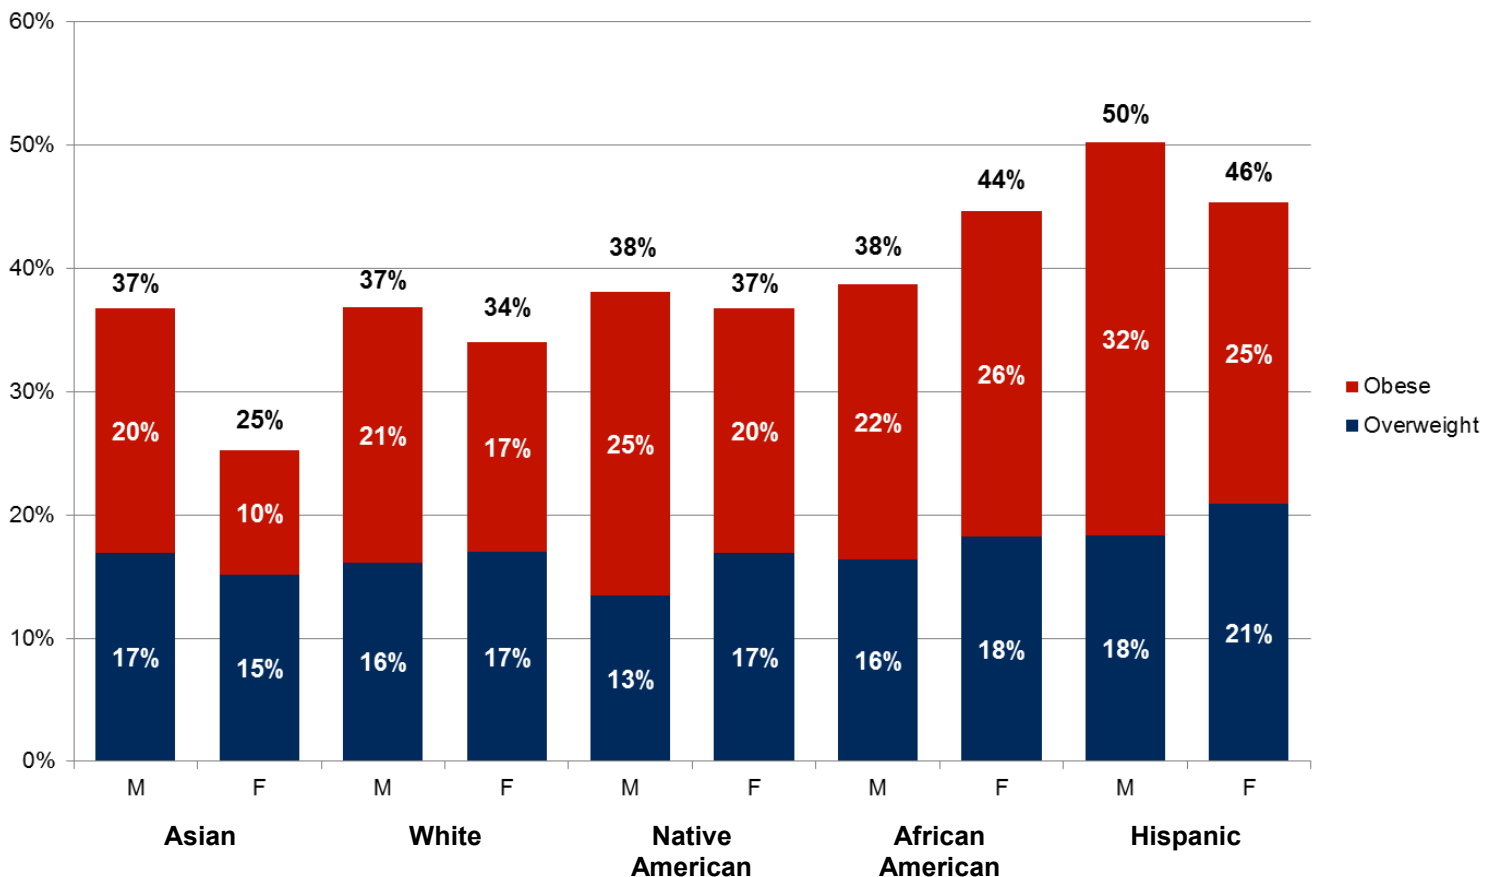

BMI Classifications by Gender and Ethnic Group

Hispanic males had the highest obesity risks when evaluating results by ethnic group and gender. Half (50 percent) of Hispanic males were classified as obese or overweight. The obesity risk was lower among African-American males and Native-American males both at 38 percent. The lowest risk among males was found in Asian and White males each at 37 percent.

The highest obesity risk among females was found in Hispanics at 46 percent, followed by African-American females at 44 percent. Native-American females had a combined overweight and obese rate of 37 percent, while 34 percent of White females, and 25 percent of Asian females were classified as obese or overweight.

A higher percentage of males than females had BMI measurements in the two heaviest categories in all ethnic groups except African Americans. The greatest difference between males and females within an ethnic group was among Asian students where 25 percent of females were in the two heaviest categories compared with 37 percent of males.

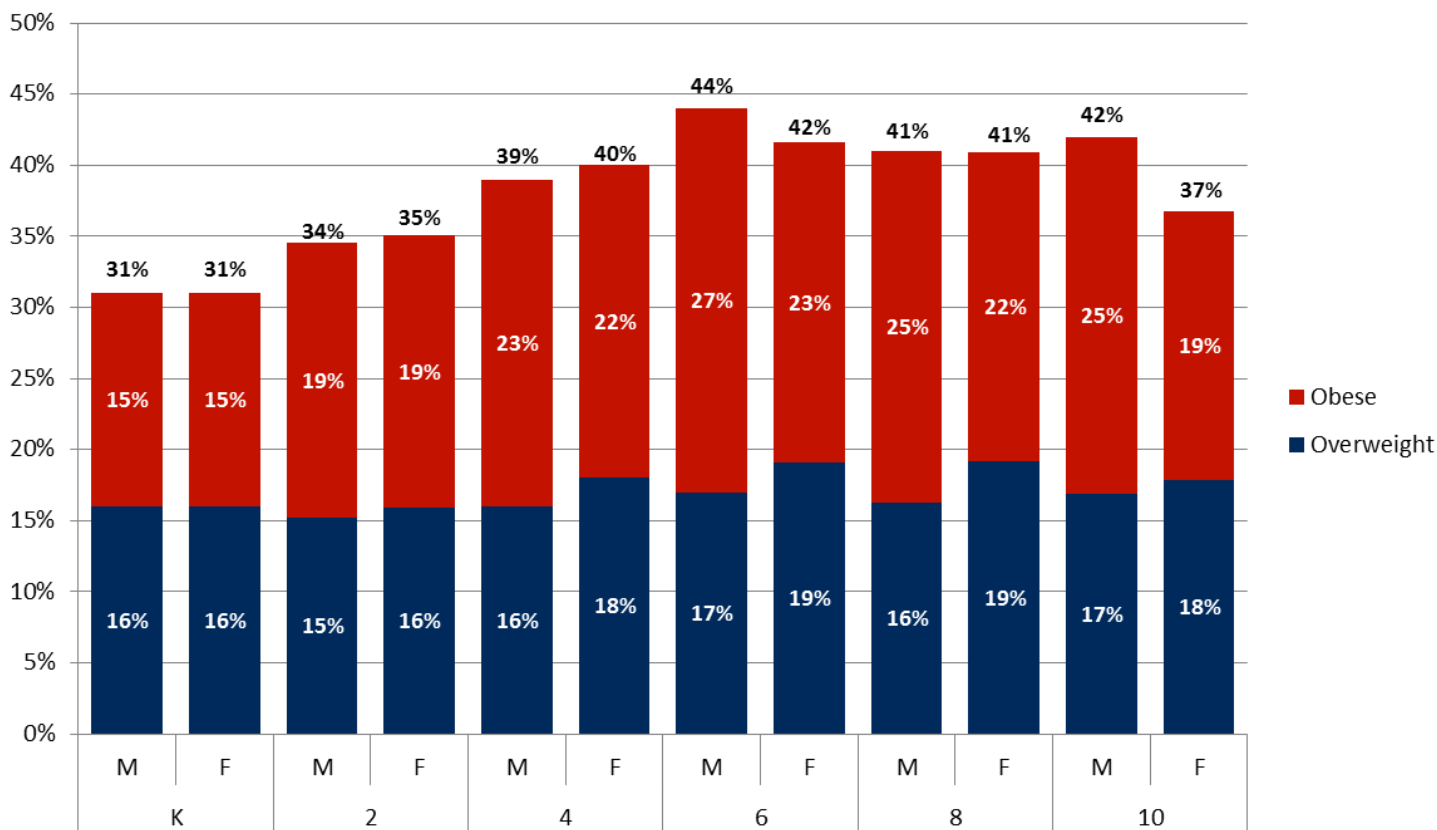

Figure 6: 2011–2012 Percentage of Students Classified as Obese or Overweight by Gender and Ethnic Group (Students in Grades K, 2, 4, 6, 8, and 10)

BMI Classifications by Gender and Grade

Data show that 31 percent of both male and female kindergarteners enter the school system either overweight or obese. In the second and fourth grades, a slightly greater percentage of females than males were classified in the overweight or obese categories. Of students in the sixth grade, males had a greater percentage than females of overweight and obese. In the tenth grade the difference in males and females is most pronounced, where 42 percent of males and 37 percent of females were in the two highest risk categories.

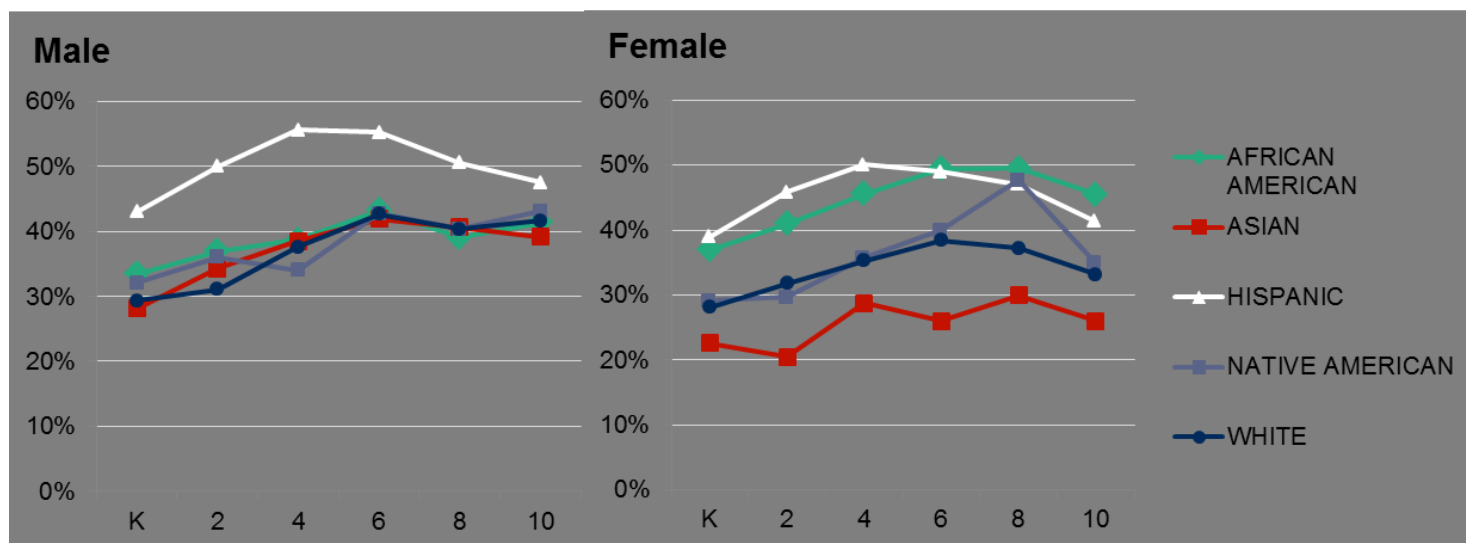

**Figure 7: 2011–2012 Percentage of Students Classified as Obese or Overweight
by Gender and Grade
(Students in Grades K, 2, 4, 6, 8, and 10)**

BMI Classifications by Gender, Ethnic Group and Grade

Analysis of the BMI assessments shows that some groups of students face a heightened risk for childhood obesity. The highest obesity rates were found among Hispanic males, especially in the fourth grade where 56 percent were classified as overweight or obese.

Figure 8: 2011–2012 Percentage of Students Classified as Obese or Overweight by Gender, Ethnic Group and Grade (Students in Grades K, 2, 4, 6, 8, and 10)

Male	African American	Asian	Hispanic	Native American	White	Female	African American	Asian	Hispanic	Native American	White

10	41%	39%	48%	43%	42%	10	45%	26%	41%	35%	33%

School District Results

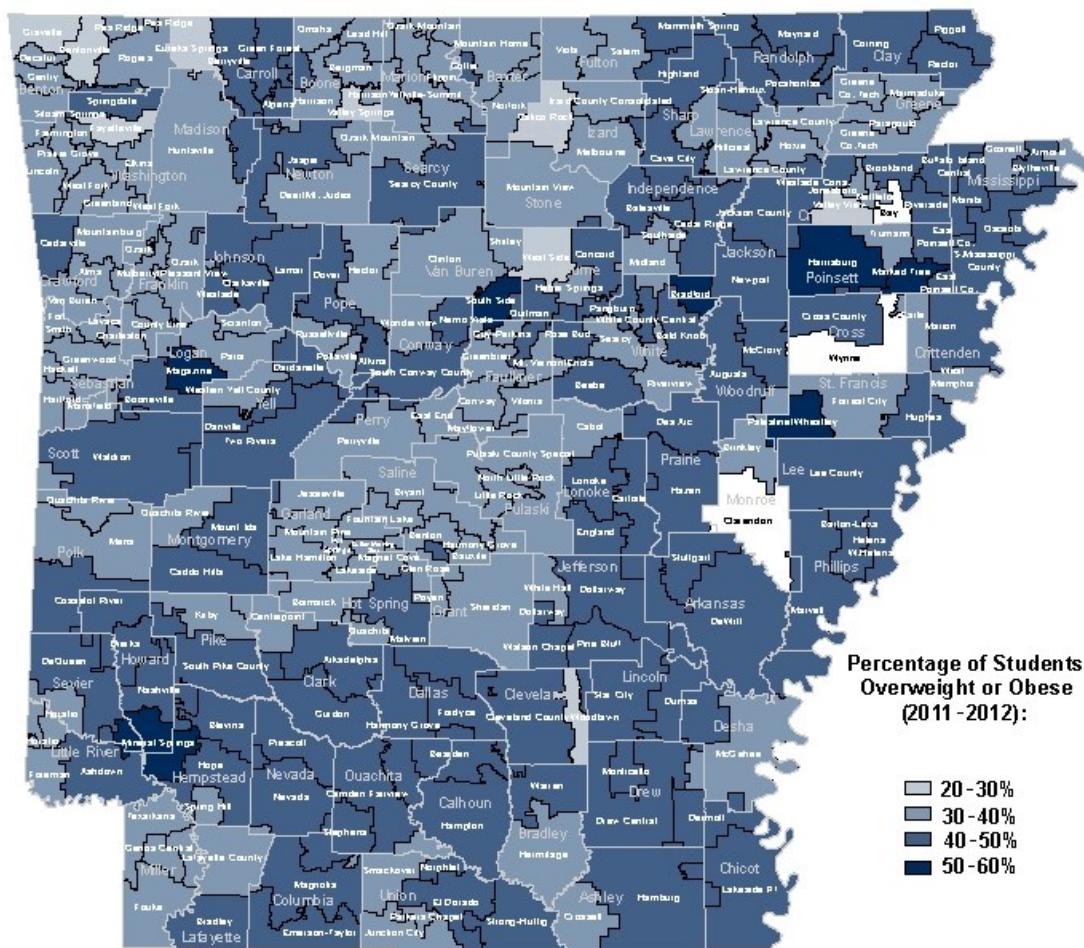

As shown on the map below, childhood obesity is a problem in every county in Arkansas. The map is shaded according to the magnitude of the percentage of students assessed as overweight or obese. The lightest shade represents the district with the lowest percentage (20–30 percent) of students classified as overweight or obese.

Among the districts reporting results, 13 school districts had 20 to 30 percent of their students classified as overweight or obese, 124 school districts had rates of more than 30 to 40 percent, 110 school districts had rates of more than 40 to 50 percent, and 7 school districts had 50 percent or more of their students in the two highest risk categories.

Of the 13 school districts that fall within the lowest range for percentage of students classified as overweight or obese, three submitted BMI assessments for less than two-thirds of their students. Therefore, the map may not reflect accurate results for some of these school districts.

Note that 18 districts including those with special school classifications are not displayed on the map because of their small geographic size. School districts shown in white did not submit BMI data.

Map 2: 2011–2012 Percentage of Students Overweight or Obese in Arkansas Public School Districts (Students in Grades K, 2, 4, 6, 8 and 10)
